

CREATE YOUR OWN FIREPLACE

First place the insert tray into the hole cut into the floor of the chamber. The 13mm lip will stop it falling through. Once installed the top of the tray will sit flush within the hearth of the fireplace

Place the decorative perforated top back on to the bio ethanol burner.

Remove the decorative perforated plate from the top of the burner. Place the two lifting handles into the slots on the left and right hand side of the burner. Lift the burner and lower into the insert tray. Remove the lifting handles from the burner.

The flueless bio burner can be used to produce a flame only effect within the chamber or fuel beds can be placed around it.

END PRODUCT

The flame picture from the bio ethanol burner resembles in every way the flame effect of a gas fire.
