BORNANO:
TOUR REPORT 2017
25th MARCH – 7th APRIL

TOUR HIGHLIGHTS
Either for rarity value, excellent views or simply a group favourite.

- Red-breasted Partridge
- Chestnut-necklaced Partridge
- Crimson-headed Partridge
- Bornean Crested Fireback
- Storm’s Stork
- Bat Hawk
- Blyth’s Hawk-Eagle
- Wallace’s Hawk-Eagle
- Lesser Fish-Eagle
- Grey-headed Fish-Eagle
- Malaysian Plover
- Violet Cuckoo
- Malaysian Hawk-Cuckoo
- Buffy Fish Owl
- Bornean Wood Owl
- Large Frogmouth
- Gould’s Frogmouth
- Whitehead’s Trogon
- Rufous-collared Kingfisher
- Rufous-backed Kingfisher
- White-crowned Hornbill
- Rhinoceros Hornbill
- Helmeted Hornbill
- Wrinkled Hornbill
- Bushy-crested Hornbill

- Golden-naped Barbet
- Great Slaty Woodpecker
- White-fronted Falconet
- Blue-crowned Hanging Parrot
- Whitehead’s Broadbill
- Blue-headed Pitta
- Bornean Banded Broadbill
- Blue-banded Pitta
- Black-crowned Pitta
- Bornean Bristlehead
- Bornean Whistler
- Crested Jay
- Bornean Black Magpie
- Bornean Green Magpie
- Bornean Stubbtail
- Fluffy-backed Tit-Babbler
- Bornean Wren-Babbler
- Black-throated Wren-Babbler
- Mountain Wren-Babbler
- Bare-headed Laughingthrush
- Everett’s Thrush
- White-crowned Shama
- Chestnut-naped Forktail
- Bornean Leafbird
- Tawny-breasted Parrotfinch

SUMMARY:
Borneo is truly amazing and provides some of the most memorable and exciting experiences possible on any birding tour. We followed the standard circuit from Mount Kinabalu, Sepilok, Kinabatangan River and finishing at the wonderful Danum Valley, plus a few extra sites along the way! There were so many highlights as you can see from the list of birds above but the stunning Whitehead’s Broadbill staring back at us from a mossy branch on Mount Kinabalu will live long in the memory. The boardwalk that takes us across the canopy at Sepilok produced our first looks at Orang-utan, as well as a Black-crowned Pitta that flew up to our lofty vantage point to take a look at us. Several boat trips along the Kinabatangan River gave us access to numerous tributaries and creeks where Storm’s Stork and Wrinkled Hornbills paraded alongside bizarre-looking Proboscis Monkeys. And then we enjoyed a pitta-fest at the incredible Danum Valley to round off another magical Sabah tour.
Day 1  ARRIVAL IN KOTA KINABALU
Following an overnight flight via Kuala Lumpur we eventually arrived in Kota Kinabalu around 11.15am, minus some of our luggage. We met our excellent guide Lee Kok Chung and drove the short distance into downtown Kota Kinabalu where we checked in to our rooms, had some lunch and then drove out to a coastal site just 30 minutes away from the hotel. The tide was just receding and there were a few shorebirds present. Within a couple of minutes we were scoping a female Malaysian Plover, a much wanted bird for some of the group and what a nice way to kick-start the tour. More and more shorebirds began arriving and we enjoyed decent scope views of both Greater and Lesser Sandplovers, Kentish, Pacific Golden and Grey Plovers, at least 6 delightful Terek Sandpipers and a pair of Ruddy Turnstones. I was surprised to hear a Yellow-bellied Prinia singing and it eventually showed reasonably well, alongside a Yellow-vented Bulbul. A Blue-throated Bee-eater also appeared nearby and a Striated Heron flew close by. From here we drove to an area of wasteland with large trees and bumped the list up even more with Green Imperial-Pigeon, Pink-necked Green-Pigeon and a pair of lovely Blue-naped Parrots. This latter species was something of a surprise and it turns out that there is a self-sustaining feral population around the town, just like the 3 Java Sparrows we also encountered here. Again, another big surprise. This area was also good for White-breasted Woodswallow, Sunda Pygmy Woodpecker, Zebra Dove, Chestnut Munia, Pied Triller, Pacific Swallow, Brown-throated and Olive-backed Sunbirds, Malaysian Pied Fantail, Asian Glossy Starling and even our first endemic – Dusky Munia. So, as I said earlier, we saw mainly a bunch of list padders but it was enjoyable to get out and put binoculars on some birds after the long flight from Europe. We returned to the hotel by 5pm and met up with Martin, our final group member, who had just flown in from Germany.

Day 2  KOTA KINABALU – RAFFLESIA CENTRE – MOUNT KINABALU
We left the hotel at 4.30am and drove up into the Crocker Mountain Range, eating our picnic breakfast before it was light enough to actually see the calling endemic Bornean Treepie above us, but we’d get great views later on. As the light improved we saw our first Ashy Drongo and then spent some time calling in a Dark Hawk-Cuckoo that flew over us several times but was pretty tricky to see perched, although some of us managed to get it in the scope. A group of 7 Wreathed Hornbills flew across the valley below us, and there was a lot of activity further along the roadside. We saw Ochraceous Bulbul (split by HBW as Chestnut-vented Bulbul and endemic to Borneo), Black-and-crimson Oriole, lots of endemic Chestnut-crested Yuhinas, a pair of nesting Long-tailed Broadbills, Grey-throated Babbler, endemic Bornean Bulbul, Cinereous Bulbul (split by HBW as Green-winged Bulbul and another Bornean endemic), and the endemic Sunda and Chestnut-hooded Laughingthrushes appeared, along with several Temminck’s Sunbirds and a distant Fiery Minivet.

We drove down the road, stopping several times to play the call of Bornean Barbet, which continued to elude us, although we did get crippling views of the endemic Mountain Barbet and a group of endemic Bornean Brown Barbets, endemic Bornean Spiderhunter, and a Spectacled Spiderhunter gleaning spiders from a web on a lamp post. Other species seen this morning included Bar-winged Flycatcher-Shrike, Blyth’s Shrike-Babbler, Asian Brown, Blue-and-white, Mugimaki and Little Pied Flycatchers and Scarlet Minivet. Overhead we had a couple of nice views of a cracking Blyth’s Hawk-Eagle.

We reached our well-appointed lodge around 3.15pm after a 90 minutes drive during which most of us had enjoyed a snooze! We decided to just chill out around the lodge and as this is a superb place for the endemic Pygmy White-eye we staked out its favourite tree. Sure enough after a 20 minute wait a pair flew in and did their thing for a while before flying away. Over the next hour or so we had repeated views and got really great looks at this sometimes tricky-to-find species. There was also Oriental Magpie Robin, Long-tailed Shrike and lots of
Chestnut Munias in the gardens as well, along with amazing views of Mount Kinabalu towering above us.

Day 3 MOUNT KINABALU

Today really encapsulated just what Asian birding is all about – it was a real rollercoaster of a ride, with highs & lows, the perseverance needed more than in any other continent and ending with the rewards. I'm not going to labour on about the blood, sweat and tears though! Anyway, after an early breakfast we left at 5.45am and it only took ten minutes to get inside the park and drive up into great habitat. Literally the first bird of the day, even before it was anywhere approaching light enough to bird was an endemic Bornean Forktail in the headlights. But this was nothing compared to the awesome endemic Everett’s Thrush feeding on the grass verge beside the road. With everyone out of the van, the bird kept feeding totally unconcerned but we needed a little more light so used our flashlight which really helped to get more detail on this stunning bird and a zoothera thrush to boot. A Snowy-browed Flycatcher was nearby and we followed this with Pale-faced Bulbul (considered an endemic by some authorities), Sunda Bush-Warbler and the endemic Bornean Whistling-Thrush. Walking up to the Timpohon Gate right at the top of the road produced lots of bird activity with tickable views of endemic Bornean Treepie, Black-capped White-Eyes, Mountain Leaf-Warbler, Yellow-breasted Warbler, numerous Chestnut-crested Yuhinas, Indigo Flycatcher and endemic Bornean Swiftlet. A stunning endemic Golden-naped Barbet appeared in a small tree right in front of us before we walked back down the road and we well and truly nailed the skulking endemic Bornean Stubtail. The final piece of action this morning came along the otherwise quiet trails where we amazingly located a group of Tawny-breasted Parrotfinches feeding ever so quietly beside the trail in a loose stand of bamboo. Incredible birds and rarely sighted in Sabah. Wow!

The afternoon session began with a pair of Sunda Cuckoo-shrikes calling back at us from the roadside trees, followed by another lengthy search for Whitehead’s Trogon. Whilst waiting, a pair of endemic Bornean Green Magpies provided us with superlative views as they circled us several times. A Sunda Cuckoo then flew in before we walked up the road and eventually a magnificent Whitehead’s Trogon was spotted and we watched this extraordinary beast for a long time. At the same spot an endemic Eye-browed Jungle Flycatcher showed briefly but we’d get it again later this evening, plus a White-browed Shortwing appeared (split by HBW as Bornean Shortwing). Then we tried one last trail before the light faded and found another Eye-browed Jungle-Flycatcher but an endemic Whitehead’s Broadbill called and we raced off after it, gaining very brief and poor flight views in the gloomy light.

Other species seen today included Wreathed Hornbills, Hair-crested Drongo and White-throated Fantail.

Day 4 MOUNT KINABALU

Our second full day on Mount Kinabalu didn’t begin too well as we had driving rain that delayed our departure from the hotel until after 6am. However it soon eased and we set ourselves up in the shelter of the restaurant in the park where we could scan the forest edge. There was quite a lot of activity here with both Sunda and Chestnut-hooded Laughingthrushes, Bornean Green Magpie, Grey-chinned Minivet, Bornean Whistling-Thrush, Eye-browed Thrush, Mountain Tailorbird and Blue-and-white Flycatcher all seen here. With the weather improving we set out on a walk around the lower areas of the mountain and we finally got the tickable views required of the endemic Black-sided Flowerpecker, plus a Crested Goshawk, and we followed this up with a pair of endemic Red-breasted Partridges calling back at us from a heavily forested slope. A close endemic Bornean Whistler was also much appreciated and a close Yellow-breasted Warbler put on a fine
show. The nearby Silau-Silau Trail was quiet so we drove up higher. It was very frustrating here as after a brief Whitehead’s Trogon appeared, a Whitehead’s Broadbill called 3 times before flying right over us and across the road before disappearing for good. We spent an age searching for the broadbill without relocating it but a walk along a narrow trail was very rewarding with a pair of Mountain Wren-Babblers performing just a few metres in front of us.

After lunch in a nearby restaurant we headed back up the mountain and at the Timpohon Gate area we had really closed looks at Yellow-breasted Warbler, Mountain Leaf-Warbler, White-throated Fantail, Sunda Bush-Warbler and Grey-throated Babbler before the rain came in again. Some of these birds were way too close to photograph and it was a great experience to see these birds right in front of our faces. Just before the rain arrived Lee called in a pair of endemic Mountain Black-eyes – our only sighting of the entire tour. With the day passing all to quickly we made one final stop with a short walk along a gloomy trail and with the mist descending rapidly we called in a trio of endemic Bare-headed Laughingthrushes that came in right over our heads but a little too high for any decent photos. And that was our day.

Day 5 MOUNT KINABALU
Another whole day on the slopes of Mount Kinabalu proved to be another rollercoaster ride and we began at the Timpohon Gate area where we discovered a fruiting tree along one of the trials which only held a pair of Eyebrowed Thrushes. We staked it our for a while in the hopes of a Fruithunter but alas it wasn’t to be. In fact it was very quiet here this morning so we descended and staked out the area we’d glimpsed the broadbill yesterday. Another briefest of glimpses followed after a few hours here, but a pair of Whitehead’s Trogons showed incredibly well, and in fact the male appeared about 20 feet right in front of me. What views we had and it was a real privilege to see this beauty up close and personal. From here we followed the Silau-Silau Trail for a long way seeing very little until all of a sudden the magic happened and a Whitehead’s Broadbill flew into a tree about 100 yards away and remained for some 20 minutes. OMG! What an absolutely stunning bird and I cannot adequately explain our emotions having been trying for two and a half days for this baby. Nearby an endemic Eyebrowed Jungle-Flycatcher showed well – please don’t call it Bornean Shade-Dweller…! Once we had all reassembled at the road we refound the broadbill again, but this time much, much closer. Just look at this vision of emerald green and black. Votes are suspended for Bird of the Trip already…!

Lunchtime was enlivened by close Temminck’s Sunbirds and a very vocal Blyth’s Shrike-Babbler. Afterwards we tried repeatedly for the elusive Whitehead’s Spiderhunter but did get a White-browed Shortwing (split by HBW/Lynx as Bornean Shortwing and yet another endemic), some confiding Black-capped White-eyes.
Orange-headed Thrush, the endemic Bornean Forktail, Asian Brown, Blue-and-white, Snowy-browed, Indigo and Mugimaki Flycatchers, and more Bornean Whistling-Thrushes. Raptors were more in evidence today between the low cloud, mist and surprising lack of rain with Crested Honey Buzzard and Changeable Hawk-Eagle being seen. We returned to the Timpohon Gate late in the day but all we had to show for our efforts was the rare Red Langur.

Other species seen today included Little Cuckoo-Dove, Mountain Imperial-Pigeon, and several Bornean Whistlers.

Day 6 MT KINABALU – SEPILOK – RAINFOREST DISCOVERY CENTRE
Spent four hours at Poring Hot Springs doing some easy birding this morning and racked up plenty of new birds for the trip as this was the first time we’d birded the lowlands. Upon arrival we walked along the road and saw plenty of endemic Dusky Munias, followed by Asian Red-eyed Bulbul and a Buff-rumped Woodpecker that flew into the palm tree next to us and began feeding. Walking into the forest we were treated to a migrant Narcissus Flycatcher, along with Yellow-bellied Warbler, Black-naped Monarch, Red-throated Sunbird, Raffles’s Malkoha, Greater Green Leafbird, Green Iora, Purple-naped Spiderhunter (formerly sunbird) and found a Gold-whiskered Barbet excavating a nest hole, followed by the bizarre sighting of a pair of endemic White-crowned Shamas feeding an almost fully grown Malaysian Hawk-Cuckoo. Further along we saw Spectacled and Black-headed Bulbuls, White-bellied Erpornis, Little Spiderhunter, Orange-bellied Flowerpecker and Plain Sunbird. Walking back down to the parking lot an Asian Emerald Dove flew by, a Buff-necked Woodpecker appeared, followed by a fine Fulvous-chested Jungle-Flycatcher and an adult Malaysian Hawk-Cuckoo. Then we followed the Waterfall Trail a short distance and found it very quiet in the rising heat of the day, although there was a Greater Racket-tailed Drongo, Olive-winged Bulbul, a pair of Red-throated Barbets showed briefly, a Rufous-tailed Tailorbird was called in, a Grey-headed Babbler was seen by two people and a Crimson Sunbird was spotted beside the path. We also scoped a Blue-eared Barbet singing away at the top of a tall tree and this is now split by HBW as Black-eared Barbet and endemic to Borneo.

After a mundane drive of around 4 hours through depresssing oil palm plantations we arrived at our lodge at Sepilok at 4pm. After dropping our bags in our rooms we met in the car park and walked around the surprisingly lush vicinity. An endemic Yellow-rumped Flowerpecker and the common Brown-throated Sunbird showed well in the garden. We scoped a distant Dollarbird and Long-tailed Parakeet, with a closer Sunda Pygmy Woodpecker seen before returning for a nice hot shower.

Day 7 SEPILOK – RAINFOREST DISCOVERY CENTRE
A great day at the Rainforest Discovery Centre full of brilliant birds and I always look forward to seeing some of those classic south-east Asian birds. It began with a Rhinoceros Hornbill in the lodge gardens at daybreak, along with Oriental Pied Hornbill and a flock of Little Green Pigeons. Then we drove just a couple of minutes to the car park at the RDC where we walked just 200m to the canopy walkway to begin our pre-breakfast birding. It was still quite early, around 6am when we arrived, so we scoped the surrounding forest of the car park where a group of Bushy-crested Hornbills appeared. So the forest was a little quiet but there was an exceptionally confiding Violet Cuckoo that was feeding in a tree right next to the walkway. Then an endemic Black-crowned Pitta began calling and unbelievably I located it perched 30 feet off the ground and only just below the level of the walkway where it was calling away and remained on view for a good 15 minutes - and
you could say the photo opportunities were quite good, despite the poor light. We hung around the walkway for a while seeing a group of Chestnut-rumped Babblers moving quickly below the walkway, Hairy-backed Bulbul, Velvet-fronted Nuthatch, Van Hasselt’s Sunbird, as well as other common species.

After breakfast (and a close Stork-billed Kingfisher) we returned to the Rainforest Discovery Centre and headed out onto the trails and managed to catch up with Rufous-collared Kingfisher thanks to some great spotting by Kath, and there was also some point-blank views of Rufous-backed (Oriental Dwarf) Kingfisher along a small stream. A pair of Fluffy-backed Tit-Babblers were exceptionally confiding, with the male performing right out in the open for us but it was a shame that a calling Black-capped Babbler didn’t come in and do the same. We also had great looks at a Little Spiderhunter, Black Hornbill, Plaintive Cuckoo, Black-and-red Broadbill, Black-and-yellow Broadbill, Cream-vented Bulbul, Lesser Green Leafbird, Ashy and Rufous-tailed Tailorbirds, and a Red Giant Flying Squirrel poking his head out of a large nestbox high overhead. Meanwhile back in the car park a group of White-rumped Spinetails were circling really quite low overhead and gave outstanding views.

After lunch in Sandakan we staked out the car park of the Orang-utan Research Centre where a Bornean Black Magpie was teed up in the scope, and an immense White-bellied Woodpecker was also seen. There were lots of Long-tailed Parakeets here as well, plus a group of 8+ Bushy-crested Hornbills and a few Common Hill-Mynas. Afterwards, we returned to the trails but it was very quiet so headed up onto the canopy walkway, where despite the light rain we had our first Bornean Orang-Utan feeding in a nearby tree. There was also an adult Wallace’s Hawk-Eagle, closer Black-winged Flycatcher-Shrikes and Black-and-yellow Broadbills, and a great scope view of White-crowned Hornbill, our 5th hornbill species of the day.

Other species seen today include Intermediate Egret, Brahminy Kite, White-bellied Sea-Eagle, Lesser Cuckoo-shrike, Fiery Minivet, Black-naped Monarch, and several Slender-billed Crows.

Day 8  SEPILOK - GOMANTONG CAVE – SUKAU – KINABATANGAN RIVER
We had a good walk from the lodge this morning, and despite not finding Hooded Pitta we scored with a cracking Chestnut-necklaced Partridge skulking in the dark and shady forest floor. We also saw Short-tailed and Black-capped Babblers here and there was a small flock in a nearby tree with Large Woodshrike and several Dark-throated Orioles picked out. A distant dead tree held a Blue-eared Barbet and a pair of Bornean Brown Barbets and there was a close pair of Blue-crowned Hanging-Parrots as well before we headed back for breakfast and then set out on the hour and a bit drive to Gomantong Cave. Upon arrival we followed the boardwalk to the cave and along the way we saw another Black-capped Babbler and a very confiding Scarlet-rumped Trogon. Once at the cave we followed the path inside where we saw Mossy-nest and Black-nest Swiftlets in huge numbers, despite the work going on collecting nests for the food trade. Unfortunately all of the Edible-nest Swiftlet nests had already been harvested and overall I don’t think this was a very good experience, seeing the guys collecting the nests and making quite a racket. You have to ask why people want to eat this stuff and surely there’s some alternative? Walking back to the coach we saw a Sooty-capped Babbler gleaning insects from the nearby trees and a Rufous-chested Flycatcher sang away beside the boardwalk allowing walk-away views.
It was just a short 20 minute drive to the Kinabatangan River and a quick five minute journey to our excellent lodge. After lunch we set out on our first boat ride and this proved to be a fantastic way to see the wildlife of the area in a very relaxed fashion. We saw Storm’s Stork quite quickly and had seconds later in the afternoon as we sailed along. The variety of birdlife you can see along the river is extraordinary and during our journey we saw Bushy-crested, Black, Oriental Pied, Rhinoceros and the much-wanted Wrinkled Hornbill as well. There was also a Peregrine, Crested Serpent-Eagle, Crested Goshawk, Grey-headed Fish-Eagle, Bat Hawk, Blue-throated Bee-eater, a gang of noisy Bold-striped Tit-Babblers and Chestnut-breasted Malkoha.

The undoubted non-avian highlight was a large male Proboscis Monkey feeding close to the river and we spent some time watching him – what a beast! But I suppose the largest Crocodile I’ve ever seen ran it a close second. This monster was along a quiet tributary and it certainly sent a few shivers along my spine – we definitely needed a bigger boat! A flyby Great Slaty Woodpecker somehow eluded most of us, but a Hooded Pitta put on quite a show, with several low flyovers before we finally nailed it on its song perch. We ended with another Black-and-red Broadbill and a Lesser Adjutant before returning to the lodge at sunset.

After a great dinner we spent an entertaining hour during which a Bornean Brown Wood Owl (hedging my bets on the name as it is a potential split!) appeared several times, followed by an awesome Large Frogmouth frozen on a branch right over our heads, and we ended with a mean-looking one-eyed Buffy Fish Owl that appeared nearby, with a Small-toothed Civet also seen. Wow!

**Day 9  KINABATANGAN RIVER**

Set out in the boat at first light, which was around 6am and headed to a narrow tributary. The only bird I really remember from the short time we were out before a heavy downpour was a pair of White-chested Babblers that showed nicely in a clearing at the water’s edge. Oh, there was also a pair of flyover Storm’s Storks, and a silhouetted Bornean Black Magpie. The downpour was almost of biblical proportions and we returned to the lodge a little wetter than when we left it. But after a fine breakfast the weather cleared and the sun put in a rare appearance, so set back out at 08:40am and returned to the same area. I think we were too late to get any response from Bornean Ground-cuckoo and indeed the surrounding forest was extremely quiet – don’t listen to other tour reports that tell you the side channels keep their activity going longer! It was hard work sitting in a boat, trundling along for hours in the sunshine and heat! Yet there were some extremely confiding birds, such as a Black-and-yellow Broadbill right beside the boat, Asian Drongo Cuckoo, Ruby-cheeked Sunbird, Red-naped Trogan, Blue-eared and Rufous-backed Kingfishers, Black-winged Flycatcher-Shrike, Malaysian Blue Flycatcher, Scarlet-backed

![Large Frogmouth](image1)

![Storm’s Stork](image2)
Flowerpecker, and last but not least the stunning endemic White-fronted Falconet. We returned to the lodge by 12:00 and nearly, but not quite, avoided another drenching.

In the afternoon we went upriver, failing to dodge more showers and got a thorough drenching but in the dry bits we saw 2 Yellow Bitterns, Striated Heron, Lesser and Grey-headed Fish-Eagles, Storm’s Stork, Wrinkled Hornbill, Wallace’s Hawk-Eagle, many Pink-necked Green-Pigeons, Indian Cuckoo, a group of 4 Rufous Woodpeckers and Collared Kingfisher.

Day 10  LAHAD DATU – BORNEO RAINFOREST LODGE - DANUM VALLEY
One final bash at the ground-cuckoo yielded zero returns but there was a fine pair of Rufous Piculets and a Maroon Woodpecker that actually revealed itself, contrary to the norm! There were also some showy White-chested Babblers, a brief Scarlet-rumped Trogon, Storm’s Stork, the usual two broadbill species, Green Iora, Indian Cuckoo, Blue-eared Kingfisher, and one final look at Proboscis Monkeys before we had to return to the lodge for breakfast, load our luggage onto the boat and return to our coach for the 2 hour drive to Lahad Datu.

After lunch and registering at the lodge’s office we set out on the 2.5 hour drive to the superb Borneo Rainforest Lodge in famous Danum Valley. Along the way we saw another Bornean Pygmy Elephant crossing the track in front of us, a large tortoise, Monitor Lizard and Whiskered Treeswift. Upon arrival our local guide did his best to fill us with gloom as according to him there hadn’t been any Bornean Bristlehead sightings for over a week (and we really need to see that endemic) and the pittas were all breeding and not showing! What a lovely greeting – think you need a new job mate!

We were eager to get out birding as soon as we arrived at the lodge so we just got into our rooms, donned leech socks, which turned out to be unnecessary, and walked along the main track. Despite the drizzle we picked up Sooty-capped, Chestnut-winged and Rufous-crowned Babblers, Banded Broadbill, Rufous-winged Philentoma, and another Narcissus Flycatcher. However, we saved the best for last as a fantastic pair of Bornean Bristleheads were found by yours truly high up in a large, moss-encrusted tree. Through the scope we had decent views as they fed and bobbed around the branches.

What a relief. Wow! So in your face Mr Local Guide – who actually turned out to be very good and a great help to us over the next few days, but not sure what all of the doom and gloom was about….. We returned to the lodge just after 6pm and there to greet us was a male Bornean Crested Fireback. Oh yes baby! We did the night drive this evening but it rained (yet again) and we only saw Lesser Mouse Deer, an invisible Malay Masked Civet and a sleeping Black-crowned Pitta. Never had much luck with these night drives here, although just a few days ago a Bornean Clouded Leopard was seen........

Day 11  DANUM VALLEY
Breakfast was at 5.30am and we were away in the truck at 6.15am to a distant trail. But first some excellent birding along the road gave us a pair of cracking Bornean Crested Jays which gave superb views although I was going to have ‘one of those days’ with the camera, getting lots of poor images of great birds. Then a Bornean Wren-Babbler began calling and appeared several times – what a bird. And we had the double-whammy within a few minutes of each other when a Black-throated Wren-Babbler put in an appearance. There was also Scaly-crowned Babbler, Silver-rumped Spinetail, Whiskered Treeswift, better views of Bornean Bristlehead, but this
time closer and really nice through the scope, Rhinoceros Hornbill, Scaly-crowned Babbler, Blyth’s Paradise-Flycatcher, and a Dark-sided Flycatcher. Just a shame we couldn’t locate a calling Helmeted Hornbill, but that would have to wait until later. Much Later...!

Then we hit the trail and it was dark and gloomy and full of leeches – I counted over 70 on me by the end of the 4 hour hike, during which we covered a tad over 2kms. A Red-bearded Bee-eater showed, along with Maroon-breasted Philentoma, Chestnut-winged Babbler, Spotted Fantail, Dark-fronted Oriole, and a Yellow-bellied Bulbul. But it was particularly quiet along here and we spent most of the time trawling for pittas despite the ridiculously loud volume of cicadas here. Eventually they quietened a little and we could hear a Blue-banded Pitta but despite trying this for an hour we couldn’t locate it and it didn’t want to come in and show itself. Next up, a Blue-headed Pitta did the same, along with a heard-only Banded Kingfisher. So the trail was hard and we’ll give another trail a bash this afternoon.

We walked the long way around the Hornbill Trail later in the afternoon, hearing Giant Pitta. There was a mum Orang-Utan with a young one and later on there was a large male sleeping high overhead. We also saw Rufous-tailed Shama, Abbott’s Babbler, Grey-rumped Treeswift, and not a lot else. A night time walk for some of us proved to be very, very good with walk-away views of Gould’s Frogmouth, as well as sleeping Horsfield’s Babbler and Rufous-backed Kingfisher.

**Day 12  DANUM VALLEY**

Enjoyed seeing a Yellow-breasted Flowerpecker at breakfast almost as much as I enjoyed the omelette this morning! So we were off on the trails again this morning and started with our first Ferruginous Babbler feeding alongside the main track, followed by Bornean Blue Flycatcher, Spotted Fantail, Grey-headed Canary-Flycatcher and further views of Bornean Bristlehead. Along the trails we walked for just over 4kms, some of it was quite muddy but on the whole it was pretty easy going with minimal leech contact – in fact my personal leech count was only 4! We saw both Scaly-crowned and Rufous-crowned Babblers, with our only Moustached Babblers of the tour seen towards the end of our walk and a brief Chestnut-naped Forktail was also seen by a few of us. But the undoubted highlight was a cracking Blue-headed Pitta that posed repeatedly for us to enjoy at leisure and what a bird this is. Just a shame the calling Great Argus couldn’t be located. We also saw the same mamma and juv Orang-Utan and large male as well during the mornings walk, with some Bornean Gibbons, a Grey-headed Fish-Eagle and a Black-and-yellow Broadbill in the garden spotted at lunchtime from the restaurant.
After lunch we met up at 3.15pm and headed over the river despite the light rain that eventually cleared and we found Striped Wren-Babbler, Hairy-backed Bulbul, Purple-naped Spiderhunter, White-crowned Forktail, both Dusky and Black-and-red Broadbill, and a superb Large-billed Blue Flycatcher.

The night drive gave us Malay Civet, Sambar, Red Giant Flying Squirrel and a heard-only Sunda Frogmouth.

**Day 13  DANUM VALLEY – LAHAD DATU – KOTA KINABALU – KUALA LUMPUR**

Our last morning along a leech-filled trail produced a wonderful finale just as it did on our last tour here, but it started quietly with just a close Lesser Green Leafbird beside the truck. But once on the trail we were treated to a fine male Blue-headed Pitta and an all-too-brief Siberian Blue Robin. We stuck at it along here for an hour without getting much, when all of a sudden and totally ‘out of the blue’ a Bornean Banded Pitta hopped down the slope in front of us and onto our life lists. A pair of Long-billed Spiderhunters at the same spot were also much appreciated as well. If that wasn’t enough just around the corner a Bornean Banded Pitta hopped across the hillside in front of us but was too quick for most people, so we returned to the site we’d heard one a few days ago. Sure enough after quite a search we had it teed up in the scope and we were done – all of Borneo’s endemic pitta species on the list! Leaving here we walked along the main track only to find a pair of Helmeted Hornbills to round off another cracking trip to Borneo. All that remained was to pack, have lunch, drive back to Lahad Datu and fly on to Kuala Lumpur where our fabulous Sabah tour concluded.

Nick Bray.
**SYSTEMATIC LIST – BORNEO: MARCH/APRIL 2017**
Species list follows IOC 8.2
Endemics in bold.

**PODICIPEDIFORMES: Podicipedidae**
Little Grebe
*Tachybaptus ruficollis*

**GALLIFORMES: Phasianidae**
Red-breasted Partridge
*Arborophila hyperythra*
Chestnut-necklaced Partridge
*Arborophila charltontii graydoni*
Crimson-headed Partridge
*Haematoryx sanguiniceps*
Bornean Crested Fireback
*Lophura ignita nobilis*
Great Argus (H)
*Argusianus argus*

**CICONIIFORMES: Ciconiidae**
Storm's Stork
*Ciconia stormi*
Lesser Adjutant
*Leptoptilos javanicus*

**PELECANIFORMES: Ardeidae**
Yellow Bittern
*Ixobrychus sinensis*
Striated Heron
*Butorides striata*
Eastern Cattle Egret
*Bubulcus coromandus*
Purple Heron
*Ardea purpurea*
Great Egret
*Ardea alba*
Intermediate Egret
*Ardea intermedia intermedia*
Little Egret
*Egretta garzetta*

**SULIFORMES: Anhingidae**
Oriental Darter
*Anhinga melanogaster*

**ACCIPITRIFORMES: Accipitridae**
Crested Honey Buzzard
*Pernis ptilorhynchus*
Crested Serpent Eagle
*Spilornis cheela*
Bat Hawk
*Macheiramphus alcinus alcinus*
Changeable Hawk-Eagle
*Nisaetus cirrhatus*
Blyth's Hawk-Eagle
*Nisaetus alboniger*
Wallace's Hawk-Eagle
*Nisaetus nanus*
Crested Goshawk
*Accipiter trivirgatus*
Brahminy Kite
*Haliastur indus*
White-bellied Sea Eagle
*Haliaeetus leucogaster*
Lesser Fish Eagle
*Haliaeetus humilis*
Grey-headed Fish Eagle
*Haliaeetus ichthyaetus*

**GRUIFORMES: Rallidae**
White-breasted Waterhen
*Amaurornis phoenicus*

**CHARADRIIFORMES: Charadriidae**
Pacific Golden Plover
*Pluvialis fulva*
Grey Plover
*Pluvialis squatarola*
Kentish Plover
*Charadrius alexandrinus*
Malaysian Plover
*Charadrius peronii*
Lesser Sand Plover  Charadrius mongolus
Greater Sand Plover  Charadrius leschenaultii

CHARADRIIFORMES: Scolopacidae
Terek Sandpiper  Xenus cinereus
Common Sandpiper  Actitis hypoleucos
Ruddy Turnstone  Arenaria interpres

COLUMBIFORMES: Columbidae
Rock Dove  Columba livia
Spotted Dove  Spilopelia chinensis
Little Cuckoo-Dove  Macropygia ruficeps nana
Asian Emerald Dove  Chalcophaps indica indica
Zebra Dove  Geopelia striata
Little Green Pigeon  Treron olax
Pink-necked Green Pigeon  Treron vernans
Green Imperial Pigeon  Ducula aenea
Mountain Imperial Pigeon  Ducula badia

CUCULIFORMES: Cuculidae
Greater Coucal  Centropus sinensis bubutus
Raffles’s Malkoha  Rhinortha chlorophaea
Chestnut-breasted Malkoha  Phaenicophaeus curvirostris
Violet Cuckoo  Chrysococcyx xanthorhynchus
Plaintive Cuckoo  Cacomantis merulinus
Dark Hawk-Cuckoo  Hierococcyx bocki
Malaysian Hawk-Cuckoo  Hierococcyx fugax
Indian Cuckoo  Cuculus micropterus
Sunda Cuckoo  Cuculus lepidus
Square-tailed Drongo Cuckoo  Surniculus lugubris

STRIGIFORMES: Strigidae
Sunda Scops Owl (H)  Otus lempiji
Buffy Fish Owl  Ketupa ketupu
Bornean Wood Owl  Strix leptogrammica vaga

CAPRIMULGIFORMES: Podargidae
Large Frogmouth  Batrachostomus auritus
Gould’s Frogmouth  Batrachostomus stellatus
Sunda Frogmouth (H)  Batrachostomus cornutus

CAPRIMULGIFORMES: Caprimulgidae
Large-tailed Nightjar  Caprimulgus macrurus salvadori

APODIFORMES: Hemiprocidae
Grey-rumped Treeswift  Hemiprocne longipennis harteti
Whiskered Treeswift  Hemiprocne comata comata

APODIFORMES: Apodidae
Glossy Swiftlet  Collocalia esculenta
Bornean Swiftlet  Collocalia dodgei
Mossy-nest Swiftlet  Aerodramus salangana natunae
Black-nest Swiftlet
Germain’s Swiftlet
Silver-rumped Spinetail
Brown-backed Needletail
House Swift

Aerodramus maximus lowi
Aerodramus germani
Rhaphidura leucopygialis
Hirundapus giganteus
Apus nipalensis

**TROGONIFORMES: Trogonidae**
Red-naped Trogon
Diard’s Trogon
Whitehead’s Trogon
Scarlet-rumped Trogon

Harpactes kasumba impavidus
Harpactes diardi diardi
Harpactes whiteheadi
Harpactes duvaucelii

**CORACIIFORMES: Coraciidae**
Oriental Dollarbird

Eurystomus orientalis

**CORACIIFORMES: Alcedinidae**
Rufous-collared Kingfisher
Banded Kingfisher (H)
Stork-billed Kingfisher
Collared Kingfisher
Blue-eared Kingfisher
Rufous-backed Kingfisher

Actenoides concretus borneanus
Lacedo pulchella melanops
Pelargopsis capensis inominata
Todiramphus chloris
Alcedo meninting verreauxii
Ceyx rufidorsa motleyi

**CORACIIFORMES: Meropidae**
Red-bearded Bee-eater
Blue-throated Bee-eater

Nyctyornis amictus
Merops viridis

**BUCEROTIFORMES: Bucerotidae**
White-crowned Hornbill
Rhinoceros Hornbill
Helmeted Hornbill
Oriental Pied Hornbill
Black Hornbill
Bushy-crested Hornbill
Wreathed Hornbill
Wrinkled Hornbill

Berenicornis comatus
Buceros rhinoceros borneoensis
Rhinoplatix vigil
Anthracoceros albirostris convexus
Anthracoceros malayanus
Anorrhinus gallerius
Rhyticeros undulatus
Rhabdotrhorrhinus corrugatus

**PICIFORMES: Megalaimidae**
Golden-whiskered Barbet
Red-throated Barbet
Mountain Barbet
Golden-naped Barbet
Blue-eared (Black-eared) Barbet
Bornean Brown Barbet

Psilopogon chrysopogon chrysopsis
Psilopogon mystacophanos
Psilopogon monticola
Psilopogon pulcherrimus
Psilopogon duvaucelii duvaucelii
Caloramphus fuliginosus

**PICIFORMES: Picidae**
Rufous Piculet
Sunda Pygmy Woodpecker
White-bellied Woodpecker
Maroon Woodpecker
Rufous Woodpecker
Buff-rumped Woodpecker

Sasia abnormis
Yungipicus moluccensis
Dryocopus javensis javensis
Blythipicus rubiginosus
Micropternus brachyurus badiosus
