

# Northern Peru

13-28 march 2016

Report compiled by  
**Roger Ahlman**

## Introduction

This was the second trip I led for Zoothera Birding. The itinerary was considerably different from the first trip, mainly because things change in this part of Peru with new sites being found, new feeders set up and new trails. Even on this trip we ran out of time because we visited new sites that offered birds that have been difficult in the past.

The trip went without any problems or hick-ups and everybody stayed healthy. The only issue was when we left the Moyobamba area, there were several strikes which here means that people block the roads. Our driver suggested that one of us should fake an illness and that we needed to see a doctor on the other side. Peter was voted a volunteer for this. A nurse came aboard and gave us permission to pass. We managed two road blocks but at the third there were logs across the road but a couple of youngsters showed us a back road around the town of Rioja. We lost a couple of hours but got through.

It was feared that the El Niño event this year would bring huge amounts of rain to western Peru and Ecuador, but we hardly had any rain, certainly not more than usual during the rainy season which is at this time of the year.

As usual on a trip like this to such a diverse area as northern Peru there are both positive and negative surprises bird wise. On the negative account was dips on Yellow-scarfed Tanager and Speckle-chested Piculet, first time in about 15 visits that I missed either of them. Tanagers in general are poorly represented in the list simply because we didn't have enough time in the foothills/lower subtropics in the Abra Patricia area because we visited new places there.

D'Orbigny's Chat-Tyrant and Unstreaked Tit-Tyrant were, on the other hand, the first time I see in northern Peru. We also found other birds that are difficult in the north like Striated Earthcreeper, Green-headed Hillstar and Stripe-headed Antpitta. On the rarity account we find Sora, Black-billed Cuckoo and Cliff Swallow.

The event of the trip happened already the first morning at Pantanos de Ventanilla just north of Lima when we watched tens of thousands of Guanay Cormorants and Peruvian Boobies in a constant stream migrating south. Absolutely breathtaking!

*Breakfast at Hacienda Limon. Gray-winged Inca-Finch, Chestnut-backed Thornbird and Black-necked Woodpecker already bagged pre-breakfast.*

## Trip overview

- 13 march** - Pantanos de Ventanilla 7.30-11.30, Rio Chonta 17.20-18.20. Night in Cajamarca
- 14 march** - San Marcos 7.00-8.20, Laguna San Nicolás 9.00-11.00, Cumbe Mayo 15.30-17.30.  
Night in Cajamarca
- 15 march** - La Encañada 6.45-9.10, Cruz Conga 9.30-17.00. Night in Celendin
- 16 march** - Hacienda Limon 6.00-8.00, Balsas 8.30-11.15, Abra Barro Negro 14.00-17.00.  
Night in Leimebamba
- 17 march** - Atuén road 6.30-8.30, Leimebamba museum feeders 9.00-9.30, El Chillo 11.00-11.30, Huembo 15.30-16.30, Lake Pomacochas 17.00-17.30. Night in Pomacochas
- 18 march** - San Lorenzo ridge 6.30-11.30, Abra Patricia 14.30-21.00. Night at Owllet Lodge
- 19 march** - Arena Blanca 6.45-10.30, Aguas Verdes 10.30-12.00, Quebrada Quisscarum 14.00, Waqanki Lodge 15.00-17.30. night at Waqanki Lodge
- 20 march** - Waqanki 6.00-12.00, west of Moyobamba 14.45-17.00, Waqanki 18.30-20.00.  
Night at Waqanki Lodge
- 21 march** - Waqanki 6.00-7.20, west of Moyobamba 7.30-9.30, Afluentes 12.00-14.30, Abra Patricia 15.00-18.00. Night at Owllet Lodge
- 22 march** - Owllet lodge 6.15-7.00, Alto Nieva 7.30-9.00, below Mirador San Martín 9.30-12.00, Mirador San Martín 14.30-16.30, Owllet lodge 17.00-18.00. Night at Owllet Lodge
- 23 march** - Owllet lodge 6.15-10.00, Magunchal 12.15-13.00 (lunch), Bagua Grande 14.00-16.00, Pirjos road 17.30-18.10. Night in Jaen
- 24 march** - Tamborapa 6.15-10.00, Limon de Porcuya 15.20-17.20. Night in Olmos
- 25 march** - Limon de Porcuya 6.20-9.30, Filoque 10.30-10.45, Bosque Pomac 15.30-17.10. Night in Tucume
- 26 march** - Tinajones 7.00-9.00, Chaparri 10.00-18.00. Night at Chaparri Lodge
- 27 march** - Cásupe 6.45-10.30, Chaparri 15.00-18.00. Night at Chaparri Lodge
- 28 march** - Tinajones 7.00-10.00, Playa Monsefu 11.15-12.15. Afternoon flight to Lima and end of trip!

## Participants

Roger Ahlman - Guide  
Bardomelo and Oscar - Drivers

Christopher Fogg - England  
Stephen Holloway - England  
Raymond Alexander - Skotland  
Peter Clarke - England

*All photos taken during the trip by Roger Ahlman*

*Complete checklists for each sites are input in [ebird.org](http://ebird.org)*

## Day-by-day

13 march

The group met for breakfast and soon we left with our luggage for a half hour drive to Pantanos de Ventanilla just north of Lima. The small lake here had the usual wetland birds plus many Black Skimmers and two Hudsonian Godwits, the latter is rare here. We made an attempt to find Black Crake in another marsh but got no response so we moved to the beach. Many thousands of Franklin's Gulls, more waders, White-eared Grebe and another Hudsonian Godwit were in the ponds by the parking. First thing we saw at the beach was a constant stream of Guanay Cormorants and Peruvian Boobies heading south...and it just kept going on...and on! 45 minutes non-stop migration with tens of thousands of birds! Many Inca Terns were thrown into the mix with some Red-legged Cormorants coming close to shore. This was arguably the spectacle of the trip. When it got hot we moved to the airport for lunch and our afternoon flight to Cajamarca. We were met by our drivers Bardomelo whom I have worked with several times before and the co-driver. As we still had some daylight we went straight to nearby Rio Chonta and soon the group had bagged the first main target for the trip - the very localized Gray-bellied Comet. Night at the very nice Laguna Seca.

*Spectacular sea-bird migration at Pantanos de Ventanilla*

14 march

Pre-dawn start for about an hour drive to San Marcos where we arrived short after dawn. While the drivers set up the breakfast table we went looking for Great Spinetail. Unfortunately someone had cleared a part of the forest just where the spinetail nests used to be. We soon heard one calling and while we looked for it a group of Finnish birders arrived and together we all had good views of a pair. While having breakfast we saw the first Spot-throated Hummingbirds and a Buff-bridled Inca-Finch. When it started to get warm we headed up to higher altitudes at Laguna San Nicolás. A walk in the barren habitat gave Band-tailed Sierra-Finch and Seed-eater. By the lake we found a female Cinereous Harrier and lots of Andean Coots and enjoyed great views of a pair of Purple-collared Woodstars. While driving along the southern edge I spotted a Plumbeous rail jogging along the shoreline and suddenly went after something else. That other bird turned out to be a Sora, a good rarity in Peru! After lunch in Cajamarca we headed uphill to a new site suggested by Baldomelo, this as we had already seen the Comet. On the way up we saw our first Rufous-webbed Tyrants and a Black-billed Shrike-Tyrant. Fog rolled in just as we came up to the higher parts but it soon let up a bit and we started to walk up a very nice valley and soon picked up Black Metaltail, Rusty-crowned Tit-Spinetail and a surprise D'Orbigny's Chat-Tyrant. Green-headed Hillstar was represented by a female and we also saw White-winged Cinclodes. Back at the bus we just about had time to enjoy a Stripe-headed Antpitta before the sky opened up and we headed back to Cajamarca for the night.

15 march

An early start for the first stop along the road to Celendin. Just past the town of La Encañada we walked up the valley and had good views of Baron's Spinetail, Giant Hummingbird, Green-tailed Trainbearer and Golden-billed Saltator. Further on we stopped at a stake-out for Striated Earthcreeper but it took some time to get some views as they were apparently in the middle of their nesting business. Stripe-headed Antpitta was heard at the same site. We made some stops and soon found the hoped-for White-tailed Shrike-Tyrant and glimpses of 'Cajamarca' Rufous Antpitta. Another stop gave the expected Streak-throated Canastero. Night in Celendin.

16 march

A pre-dawn start saw us at Hacienda Limon just in time when the Gray-winged Inca-Finches started to sing. Nice scope-views of that and just when we were about to head to the breakfast spot, a pair of Chestnut-backed Thornbirds started to sing. Brilliant views of them and the two main targets for the area bagged. After breakfast we drove a bit further downhill to look for the notoriously difficult Yellow-faced Parrotlet. While we walked the road we enjoyed Buff-bridled Inca-Finches and Black-necked Woodpecker and it was also here that another of the rarities was found, this time by Chris who spotted a Black-billed Cuckoo! No Parrotlets so we moved down to Balsas and almost immediately found a pair. A bit higher up we stopped at a spot with an overview of the orchards and soon a few Peruvian Pigeon flew by below eye-level! All targets seen before 11.15 so we headed uphill for a lunch and then up to Abra Barro Negro. The Coppery Metaltail we were looking for took some time to find but eventually we had gripping views of one. Night in Leimebamba.

*Black-necked Woodpecker typically perched on a cacti at Hacienda Limon*

17 march

We started with some birding along the Atuén road. First hour was very slow but then we picked up activity with Maroon-belted Chat-Tyrant, Andean Guan, Gray-breasted Mountain-Toucan and a flock with Black-capped Tyrannulet among others. Stephen scored biggest with a Red-hooded Tanager. As we had a bit of a drive to do and many other species to look for, we moved to the feeders at the Leimebamba museum. Purple-throated Sunangel and Rainbow Starfrontlet were soon seen and we enjoyed the amazing Swordbilled Hummingbird. An hour or so lower down we stopped at El Chillo Lodge and after a bit of searching we found a pair of Koepcke's Screech-Owls on daytime roost. A short walk down the road gave excellent views of a pair of Little Woodstars floating about in the air. Males are rarely seen but we had the privilege of enjoying a crisp male feeding on a flower. Further down along the Utcubamba river we picked up Fasciated Tiger-Herons and a pair of Torrent Ducks and more Peruvian Pigeons, this time perched. After lunch near Pedro Ruiz, we headed uphill to Huembo and the feeders there. A male Marvelous Spatuletail, arguably the highlight of a trip to northern Peru, showed almost immediately. Over the next hour we had several views of one or two here. We had time for a quick visit to lake Pomacochas but not much was on offer. An obliging Alder Flycatcher at the edge of the reed was nice. Night in Pomacochas.

18 march

We picked up the local guide Santos at 6 am and headed up to San Lorenzo village. From here we hiked up on a rather strenuous walk. We soon heard a Rusty-tinged Antpitta and decided to try for it. While we waited a big woodpecker landed in front of us and it turned out to be a Crimson-bellied Woodpecker rather than the expected Powerful! Very high in altitude here at 2750 m. No luck with the antpitta but a Black-throated Tody-Tyrant showed very well. Higher up we sneaked down into a hole in the bamboo thicket and almost immediately an impressive Pale-billed Antpitta came in and showed off in front of us, easily well worth the effort just for this bird. Back on the trail again it was rather quiet but we did find a pair of the endemic Russet-mantled Softtail that we enjoyed walk-away views of. On the way back we found a family group of Unstreaked Tit-Tyrants that performed in front of my camera. We also staked out some flowers and soon a Violet-throated Starfrontlet came in. After a nice trout lunch in town we headed for Abra Patricia and the owl lodge just to be met by rain. We did the hummingbirds while waiting for the rain to ease. When it cleared we went to the ridge-top trail but no luck with Royal Sunangel, Bar-winged Wood-Wren showed briefly. As it was clear in the late afternoon we decided to try for owls at Alto Nieva. With the help of the local guides there we saw the mythical Long-whiskered Owlet and on the way back a Cinnamon Screech-Owl. A long day with some efforts required but there were some quality birds to log today...to say the least.

*Unstreaked Tit-Tyrant at San Lorenzo ridge, peruvian endemic*

19 march

As we were heading further east today, I decided to try the relatively new Arena Blanca reserve as I had heard of major improvements there compared to last year when I was there. We started off in the hide and soon were watching a Cinereous Tinamou feeding on corn. Two more came in before a slow spell set in and we moved 100 m to a fantastic set of busy hummingbird feeders. In less than an hour we had 16 species here including Napo Sabrewing, Amethyst Woodstar, Rufous-crested Coquette and the funky Wire-tailed Thorntail. While we were there a family of Little Tinamous showed up at the hide and the group went back there in time for a family of Rufous-breasted Wood-Quails to come in! A Gray-necked Wood-Rail showed briefly before we had

to leave. Just out of Aguas Verdes we walked the road and picked up many new birds including the endemic Black-bellied (Huallaga) Tanager and a Ferruginous Pygmy-Owl. Near the bridge we had lunch while an adult Black-and-chestnut Eagle put in a nice show just over the ridge, a species I have not seen in this area before despite many days spent here. A couple of hours later saw us at Quebrada Quisscarum to enjoy about 50 Oil-birds from above. After a short drive we came to the very nice Waqanki Lodge and got installed. The excellent hummingbird feeders here has much the same species as at Arena Blanca but we added Great-billed Hermit and Rufous-breasted Hermit to the list. Playback of the endemic Mishana Tyrannulet was successful as we enjoyed scope-views of one nearby.

20 march

Together with the local guide and part owner of the lodge, José Altamirano, we walked up the Quebrada Mishkiyaki. At the forest edge we enjoyed nice looks at the tiny Short-tailed Pygmy-Tyrant as well as Sooty-headed Tyrannulet. Higher up was a pair of the sought-after Lanceolated Monklet and also Black-and-white Tody-Flycatcher, Yellow-crested Tanager, Tawny-crowned Greenlet and Olivaceous Flatbill. Some rain was a problem and made viewing conditions difficult. On the way down we taped in a pair of Tataupa Tinamous and briefly a Pearly-vented Tody-Flycatcher. In the afternoon we birded open habitat west of Moyobamba. A pair of Masked Ducks in a pond was nice and nearby we had good views of a Stripe-necked Tody-Flycatcher. Another stop yielded a pair of Black-billed Seed-Finches and at some rice paddies we enjoyed several Oriole Blackbirds while Spotted Rail and Rufous-sided Crakes remained hidden in the vegetation. At dusk we walked up into the forest to try for owls. A Vermiculated Screech-Owl responded at a stake-out but remained too far away in dense tangles to be seen. From here we heard Band-bellied Owls back towards the lodge but when we came there we had no response whatsoever.

*Male Black-billed Seed-Finch west of Moyobamba*

21 march

After a short walk around the lodge grounds we headed west stopping at the same places as yesterday but this time, in the morning, we scored a nice pair of Rusty-backed Antwrens, a pair of Cinereous-breasted Spinetails and an Alder Flycatcher. When leaving this site we ran into problems as the road was blocked by a 48 hr strike! Bardomelo suggested that one of us should pretend to be ill and that we were on our way to see a doctor at Abra Patricia. As Chris and Raymond had already been out looking at the road block the choice was between Peter and Stephen with the former being voted as a volunteer. So Peter was placed in the back of the bus with a towel over the head. A doctor came aboard for a quick examination and gave us permission to pass. At the

next road block at Rioja we did the same show but at the last stop we simply couldn't pass as they had big logs across the road. Some youngsters showed us a back road around the town and we soon had left this behind us with a delay of a couple of hours. Up at Afluentes we had lunch and watched the new feeders here which had Gray-chinned Hermit and Ecuadorian Piedtail. A Barred Hawk came over and I got some pictures which turned out to be the first for the species in Peru! Record has been submitted to the rarities committee. Higher up we again tried for Royal Sunangel this time with a better result, nice views of a male and a female with a Green-fronted Lancebill coming to the same flowers. A Crowned Slaty-Flycatcher was a surprise find here and a new species for the Abra Patricia area! Night at the Owlet Lodge.

22 march

We started the day at the Alto Nieva reserve and quickly added Rufous-vented Whitetip and Buff-thighed Puffleg to the growing hummingbird list. The forest was quiet but playback for Ochre-fronted Antpitta yielded good looks at a male. Next for the list was a very obliging pair of Bar-winged Wood-Wrens. Happy with this we moved down the road a bit and caught up with the Finnish group. They had just located a pair of Crimson-bellied Woodpeckers which we had very nice views of. A big flock here had Plumbeous-crowned Tyrannulet, Cock-of-the-Rock and Rufous-crested Tanager among others. A short bit lower down we visited another feeder set up and soon got the hoped for Tawny-bellied Hermit. After lunch at the lodge we went back down the road and eventually found a good flock which among other things had Inca Flycatcher, Vermilion Tanagers, Ash-browed Spinetail and Gray-mantled Wren. Another stop gave Oleaginous Hemispingus before we headed back to the lodge and called it a day.

23 march

All morning on the trails behind the lodge. It was quiet, maybe because of the light rain that bothered us shortly. A pair of Chestnut-breasted Wrens came in to playback but was hard to get a good look at. Eventually we picked up some activity with Variable Antshrike and a pair of Yellow-billed Caciques showing surprisingly well. After this we had a long drive to Jaen in the middle Marañon. Lunch near a village gave a pair of Pearl Kite. Then came the not so inspiring desert walk in the middle of the afternoon heat. The shumbae subspecies of Collared Antshrike came easy but Little Inca-Finch was more difficult. Chris spotted one but it flew off and some of us only got a distant flight view. Bardomelo had another site a few kilometers further up the road. This place worked much better with two Inca-Finches popping up at the top of cactuses in response to playback of Pacific Pygmy-Owl. Short-tailed Field-Tyrant showed well too. At Jaen we drove straight up to a side road and had excellent views of a pair of Marañon Crescentchest, a species that is normally very skulking. Northern (Marañon) Slaty-Antshrike came easy too. Night in Jaen

24 march

We started an hour north of Jaen near the town of Taborapa in the dry forest. Necklaced (Chinchipe) Spinetail came easy before breakfast. On the trail we had the usual difficulties of actually seeing the Marañon Spinetails. Several pairs are here and we heard them but they are not responsive to playback but eventually we had had some views of them. Back down the road I taped in a pair of Yellow-cheeked Becards before it started to get hot. A long drive up to the Abra Porculla which is a low pass and the continental

divide and down a bit on the pacific side to the village Limon de Porcuya. Here we went up a dirt track and started birding the scrub. It was quiet as can be expected in the afternoon but with playback of Pacific Pygmy-Owl birds popped out of the bushes and in two hours we pretty much cleaned the site with no less than 7 Piura Chat-Tyrants, Rufous-necked Foliage-Gleaners, Chapman's Antshrike, Black-cowled Saltators, Bay-crowned Brushfinches and some stunning Rufous-winged Tyrannulets among others. Happy with this we drove down to Olmos for the night.

25 march

We really didn't have much more to do at Limon de Porcuya but went back up there in the morning. Much the same species as yesterday but also a pair of Ecuadorian Piculets and three males Peruvian Sheartails with one of them putting in a spectacular show. After this we went to Filoque to try for rails but the water levels were not favorable for that. 2 Wood Storks flew by. My usual stake-out for lunch, a local seafood restaurant worked well this time as well. We drove on to Tucume and checked in at the hotel and headed out straight to Bosque Pomac. I had little hope of finding the localized Peruvian Plantcutter but we went to a place where I have seen it before and first bird was a male Plantcutter! After picking up some common birds here we went to another spot that Chris thought was just a barren desert. Well, half an hour later he had Tumbes Swallow, Coastal Miner, Rufous Flycatcher and Cinereous Finch on his list! Four Peruvian endemics and no more complains about the choice of birding sites. Happy with this we went back to the hotel.

26 march

As we had made a clean sweep at Pomac yesterday we started early for Chaparri. At dawn we came to a stake-out for Chestnut-collared Swallow and saw about 100 flying in and out from a bridge where they nest. At the Tinajones reservoir we had breakfast and birded the lake and wetlands. This is one of few places for the Black-faced Ibis in northern Peru and we soon found four. Several Great Grebes, distant Comb Ducks, nine Wood Storks and some Savanna Hawks and a lone Chilean Flamingo alongside common wetland birds was the tally for the morning. We then drove in to the Chaparri Lodge and got installed. Lots of people here now during the Easter holidays. In the afternoon we did a walk and got the local Tumbes Tyrant now being difficult as they nest and are very quiet. Sooty-crowned Flycatcher, Scarlet-backed Woodpeckers mating, Lineated Woodpecker and Elegant Cresentchest were other birds of note for the afternoon.

27 march

A pre-dawn start for the higher parts at Cásupe. On the way out we flushed several Scrub (aka Anthony's) Nightjars and briefly a Peruvian Thickknee. The morning yielded excellent views of Henna-hooded Foliage-Gleaners, Gray-breasted Flycatchers feeding young, Black-capped sparrows and a lek of Gray-chinned Hermits of the porcellae subspecies, sometimes split as Porculla Hermit. A bit lower down we got a response from a Black-and-white Tanager but it managed to stay hidden. White-headed Brushfinch showed well instead and playback for a Pacific Elaenia gave a very agitated pair with the male flaring its yellow crest in spectacular manners making even those not really enjoying flycatchers admit that this bird was well worth looking at. The afternoon started just by the lodge as Raymond had found a Tumbes Hummingbird and we soon found two birds singing. Not much else new as we had seen almost everything on offer at this site but we enjoyed additional views of Parrot-billed Seedeaters, Baird's Flycatchers and the local White-winged Guans. At one spot another Tumbes Tyrant popped up in response to playback of the Pygmy-Owl.

28 march

Sulphur-throated Finch was still missing so we went back out to the Tinajones reservoir and had nice views on the way and probably well over 1000 coming in small flocks heading south to drinking/feeding areas. We tried for Spotted Rail but only got some Plumbeous Rails into view. While the locals walked up the hillside to search for Thickknees (in vain) we enjoyed a family of Burrowing Owls with two small downy chicks. Happy with this we drove on to Chiclayo and to the beach near Monsefu. Lots of seabirds here with many White-vented Storm-Petrels being close to shore, a few Arctic Skuas and two Pomarine Skuas harassing the gulls and terns. After some scanning we had seen 5 Waved Albatrosses and a Sooty Shearwater, some Blue-footed Boobies, a Snowy Plover on the beach and a flock of Sanderlings. Lunch was at another excellent seafood restaurant with a sea-view. This was the end of the trip and we went to the airport for our afternoon flight back to Lima.

# Species List

## *Follows IOC*

*If there is no subspecies then it is most likely a monotypic species but in a few cases it wasn't possible to define which subspecies we saw*

- Little Tinamou**                    **Crypturellus soui nigriceps**  
    Heard at Arena Blanca
- Cinereous Tinamou**            **Crypturellus cinereus**  
    3 seen at Arena Blanca
- Tataupa Tinamou**              **Crypturellus tataupa inops**  
    2 seen at Waqanki, heard at Pirjos road and Tamborapa
- Andean Tinamou**                **Nothoprocta pentlandii**  
    1 seen at Cásupe and several heard at Chaparri
- Speckled Chachalaca**        **Ortalis guttata guttata**  
    Heard at Arena Blanca and Waqanki
- Andean Guan**                    **Penelope montagnii plumosa**  
    1 seen on the Atué road
- White-winged Guan**          **Penelope albipennis**  
    About 10 seen at Chaparri
- Rufous-breasted Wood Quail**    **Odontophorus speciosus speciosus**  
    3 seen at Arena Blanca
- Torrent Duck**                    **Merganetta armata leucogenis**  
    1 pair seen in the Utcubamba river
- Comb Duck**                      **Sarkidiornis sylvicola**  
    About 30 seen at Tinajones reservoir
- Blue-winged Teal**              **Anas discors**  
    6 seen at Laguna San Nicolás
- Cinnamon Teal**                 **Anas cyanoptera orinoma**  
    15 seen at Pantanos de Ventanilla and 4 seen at Tinajones
- White-cheeked Pintail**        **Anas bahamensis rubrirostris**  
    47 at Pantanos de Ventanilla, 100 at Tinajones
- Andean Duck**                    **Oxyura ferruginea**  
    4 at Pantanos de Ventanilla and 50 at Laguna San Nicolás
- Masked Duck**                    **Nomonyx dominicus**  
    1 pair near Moyobamba

*Pair of Masked Duck near Moyobamba. Rare and local in northern Peru*

<b>Pied-billed Grebe</b>	<b>Podilymbus podiceps antarcticus</b>
1 seen at Pantanos de Ventanilla, 3 seen at Laguna San Nicolás	
<b>White-tufted Grebe</b>	<b>Rollandia rolland chilensis</b>
12 seen at Pantanos de Ventanilla	
<b>Great Grebe</b>	<b>Podiceps major major</b>
7 seen at Tinajones	
<b>Chilean Flamingo</b>	<b>Phoenicopterus chilensis</b>
1 seen at Tinajones	
<b>Black-faced Ibis</b>	<b>Theristicus melanopis</b>
4 seen at Tinajones	
<b>Puna Ibis</b>	<b>Plegadis ridgway</b>
14 seen at Laguna San Nicolás	
<b>Fasciated Tiger Heron</b>	<b>Tigrisoma fasciatum salmoni</b>
5 seen along the Utcubamba river	
<b>Black-crowned Night Heron</b>	<b>Nycticorax nycticorax hoactli</b>
1 seen at Laguna San Nicolás, 3-4 seen at Tinajones	
<b>Striated Heron</b>	<b>Butorides striata striata</b>
Singles in most wetlands	
<b>Western Cattle Egret</b>	<b>Bubulcus ibis</b>
Common in fields and rice paddies throughout	

*A family of the very secretive Rufous-breasted Wood-Quail is coming in to the corn feeders at Arena Blanca*

<b>Cocoi Heron</b>	<b>Ardea cocoi</b>
5 seen at Tinajones	
<b>Great Egret</b>	<b>Ardea alba egretta</b>
Fairly common in rice paddies and fields	
<b>Little Blue Heron</b>	<b>Egretta caerulea</b>
1 seen near Moyobamba and 6 seen at Tinajones	
<b>Snowy Egret</b>	<b>Egretta thula thula</b>
Fairly common in wetlands and rice paddies	
<b>Peruvian Pelican</b>	<b>Pelecanus thagus</b>
About 200 at Ventanilla beach, 50 at Playa Monsefu	

- Magnificent Frigatebird** *Fregata magnificens*  
2 seen at Playa Monsefu
- Peruvian Booby** *Sula variegata*  
10 000's migrating south at Ventanilla beach
- Blue-footed Booby** *Sula nebouxii*  
10 seen at Playa Monsefu
- Neotropic Cormorant** *Phalacrocorax brasilianus brasilianus*  
5 seen at Pantanos de Ventanilla, 500 at Tinajones
- Guanay Cormorant** *Phalacrocorax bougainvillii*  
Probably over 100 000 at Ventanilla beach!
- Red-legged Cormorant** *Phalacrocorax gaimardi*  
About 50 at Ventanilla beach
- Wood Stork** *Mycteria americana*  
2 seen at Filoque and 9 seen at Tinajones
- Turkey Vulture** *Cathartes aura*  
Common in the west (ssp *jota*), Common in the east (ssp *ruficollis*)
- Greater Yellow-headed Vulture** *Cathartes melambrotus*  
1 seen west of Moyobamba
- Black Vulture** *Coragyps atratus*  
Common throughout, even seen at 3500 m near Cruz Conga
- Western Osprey** *Pandion haliaetus carolinensis*  
1 seen at Tinajones
- Pearl Kite** *Gampsonyx swainsonii*  
2 seen at Magunchal along the Utcubamba river (ssp *swainsonii*), 1 seen near Tinajones (ssp *magnus*)
- Swallow-tailed Kite** *Elanoides forficatus yetapa*  
22 seen at Aguas Verdes and 1 seen at Abra Patricia
- Black-and-chestnut Eagle** *Spizaetus isidori*  
1 adult at Aguas Verdes

*Adult Black-and-chestnut Eagle at Aguas Verdes*

<b>Double-toothed Kite</b>	<b>Harpagus bidentatus bidentatus</b>
2 at Aguas Verdes	
<b>Plain-breasted Hawk</b>	<b>Accipiter ventralis</b>
1 seen at Rio Chonta, 1 seen at Owllet Lodge	
<b>Cinereous Harrier</b>	<b>Circus cinereus</b>
1 female seen at Laguna San Nicolás	
<b>Barred Hawk</b>	<b>Leucopternis princeps</b>
1 seen at Afluentes. This is probably the first photograph of the species in Peru!	
<b>Savanna Hawk</b>	<b>Buteogallus meridionalis</b>
6 seen at Tinajones	
<b>Roadside Hawk</b>	<b>Rupornis magnirostris occiduus</b>
Singles seen at Balsas, Waqanki, Abra Patricia and Tamborapa	
<b>Harris's Hawk</b>	<b>Parabuteo unicinctus harrisi</b>

<b>Royal Tern</b>	<b>Thalasseus maximus maximus</b>
100 seen at Playa Monsefu	
<b>Elegant Tern</b>	<b>Thalasseus elegans</b>
50 seen at Ventanilla beach and 100 seen at Playa Monsefu	
<b>Cabot's Tern</b>	<b>Thalasseus acuflavidus acuflavidus</b>
5 seen at Playa Monsefu	
<b>Inca Tern</b>	<b>Larosterna inca</b>
500 seen at Ventanilla beach	
<b>Rock Dove</b>	<b>Columba livia livia</b>
Seen in towns	
<b>Scaled Pigeon</b>	<b>Patagioenas speciosa</b>
1 heard at Arena Blanca	
<b>Band-tailed Pigeon</b>	<b>Patagioenas fasciata albilinea</b>
Common at Abra Patricia and Limon de Porcuya	
<b>Marañon Pigeon</b>	<b>Patagioenas oenops</b>
3 seen at Balsas and 4 seen along the Utcubamba river	
<b>Plumbeous Pigeon</b>	<b>Patagioenas plumbea pallescens</b>
1 heard at Waqanki	
<b>Ruddy Pigeon</b>	<b>Patagioenas subvinacea ogilviegranti</b>
1 seen at Arena Blanca and 1 heard at Abra Patricia	
<b>Eared Dove</b>	<b>Zenaida auriculata hypoleuca</b>
Common at most open sites	
<b>West Peruvian Dove</b>	<b>Zenaida meloda</b>
Common in the western lowlands in dry places	
<b>Ruddy Ground Dove</b>	<b>Columbina talpacoti talpacoti</b>
Fairly common at Waqanki and Moyobamba	
<b>Croaking Ground Dove</b>	<b>Columbina cruziana</b>
Common in the dry western lowlands	
<b>Blue Ground Dove</b>	<b>Claravis pretiosa</b>
Singles heard at Hacienda Limon, Waqanki and Tamborapa	
<b>Bare-faced Ground Dove</b>	<b>Metriopelia ceciliae obsoleta</b>
20 between Hacienda Limon and Balsas, 2 seen near Abra Porculla	
<b>White-tipped Dove</b>	<b>Leptotila verreauxi</b>
Several seen at Balsas, Hacienda Limon and Chaparri. Singles heard at San Marcos, Leimebamba and Tamborapa (ssp <i>decolor</i> ). 1 heard at Waqanki and 1 seen at Abra Patricia (ssp <i>decipiens</i> )	
<b>Mitred Parakeet</b>	<b>Aratinga mitrata chlorogenys</b>
Common in the Utcubamba valley between Leimebamab and Pedro Ruiz and Huembo	
<b>Red-masked Parakeet</b>	<b>Aratinga erythrogenys</b>
50 seen at Chaparri and 2 seen at Cásupe	
<b>White-eyed Parakeet</b>	<b>Aratinga leucophthalma callogenys</b>
Singles seen at Abra Patricia and Waqanki. About 50 at Quebrada Quisscarum	
<b>Barred Parakeet</b>	<b>Bolborhynchus lineola tigrinus</b>
Heard at Abra Patricia	
<b>Pacific Parrotlet</b>	<b>Forpus coelestis</b>
5 seen at Bagua Grande, common in the western lowlands	
<b>Yellow-faced Parrotlet</b>	<b>Forpus xanthops</b>
2+3 seen at Balsas	

- Cobalt-winged Parakeet** *Brotogeris cyanoptera gustavi*  
Singles seen and heard at Waqanki-Moyobamba
- Blue-headed Parrot** *Pionus menstruus menstruus*  
About 20 seen at Waqanki
- White-capped Parrot** *Pionus seniloides*  
2 seen at Abra Barro Negro
- Scaly-naped Amazon** *Amazona mercenarius mercenarius*  
1 seen at San Lorenzo and 4-5 at Abra Patricia
- Smooth-billed Ani** *Crotophaga ani*  
Small numbers at Waqanki-Moyobamba
- Groove-billed Ani** *Crotophaga sulcirostris*  
Fairly common in the dry Marañon drainage and western lowlands
- Striped Cuckoo** *Tapera naevia*  
Heard at San marcos and 2 seen at Hacienda Limon
- Squirrel Cuckoo** *Piaya cayana nigricrissa*  
1 seen at Aguas Verdes, 3-4 at Waqanki
- Black-billed Cuckoo** *Coccyzus erythrophthalmus*  
1 seen between Hacienda Limon and Balsas. A good rarity in Peru!
- Tropical Screech Owl** *Megascops choliba cruciger*  
2 seen at Waqanki
- Koepcke's Screech Owl** *Megascops koepckeae koepckeae*  
2 seen at day-time roost at El Chillo
- Cinnamon Screech Owl** *Megascops petersoni*  
1 seen at Alto Nieva

<b>Olive-backed Woodcreeper</b>	<b>Xiphorhynchus triangularis triangularis</b>
1 seen below Abra Patricia	
<b>Streak-headed Woodcreeper</b>	<b>Lepidocolaptes souleyetii souleyetii</b>
1 seen at Bosque Pomac and 2 at Chaparri	
<b>Montane Woodcreeper</b>	<b>Lepidocolaptes lacrymiger warscewiczii</b>
1 seen on the Atué road and 2 at Abra Patricia	
<b>Duida Woodcreeper</b>	<b>Lepidocolaptes duidae</b>
2 seen at Waqanki	
<b>Collared Antshrike</b>	<b>Thamnophilus bernardi</b>
2 seen near Bagua Grande (ssp <i>shumbae</i> ), Several seen at Chaparri (ssp <i>piurae</i> )	
<b>Barred Antshrike</b>	<b>Thamnophilus doliatus radiatus</b>
2 seen at Waqanki	
<b>Chapman's Antshrike</b>	<b>Thamnophilus zarumae palamblae</b>
5 seen at Limon de Porcuya	
<b>Lined Antshrike</b>	<b>Thamnophilus tenuipunctatus berlepschi</b>
1 heard at Arena Blanca and 1 male seen at Afluentes	
<b>Uniform Antshrike</b>	<b>Thamnophilus unicolor caudatus</b>
1 female seen below Abra Patricia	
<b>Plain-winged Antshrike</b>	<b>Thamnophilus schistaceus capitalis</b>
1 heard at Waqanki	
<b>Northern Slaty Antshrike</b>	<b>Thamnophilus punctatus leucogaster</b>
2 seen on the Pirjos road and heard at Tamborapa	
<b>Variable Antshrike</b>	<b>Thamnophilus caerulescens subandinus</b>
1 pair seen at Abra Patricia	
<b>Plain Antvireo</b>	<b>Dysithamnus mentalis tambillanus</b>
1 female seen at Afluentes	
<b>Foothill Antwren</b>	<b>Epinecrophylla spodionota sororia</b>
1 seen at Waqanki	
<b>Ornate Antwren</b>	<b>Epinecrophylla ornata saturata</b>
2 seen at Waqanki	
<b>Slaty Antwren</b>	<b>Myrmotherula schisticolor interior</b>
2 seen at Abra Patricia	
<b>Rusty-backed Antwren</b>	<b>Formicivora rufa urubambae</b>
1 pair seen west of Moyobamba	
<b>Streak-headed Antbird</b>	<b>Drymophila striaticeps</b>
1 seen and a few heard at Abra Patricia	
<b>Blackish Antbird</b>	<b>Cercomacra nigrescens aequatorialis</b>
1 pair seen at Afluentes	

- Peruvian Warbling Antbird**      **Hypocnemis peruviana saturata**  
 2 heard at Waqanki
- Northern Chestnut-tailed Antbird**      **Myrmeciza castanea centuncolorum**  
 2 heard at Arean Blanca (aka Zimmer's Antbird)
- Scaled Antpitta**      **Grallaria guatemalensis regulus**  
 2 heard at Limon de Porcuya
- Chestnut-crowned Antpitta**      **Grallaria ruficapilla albiloris**  
 Heard at Hacienda Limon and Limon de Porcuya
- Stripe-headed Antpitta**      **Grallaria andicolus andicolus**  
 1 seen at Cumbe Mayo and 1 heard near Cruz Conga
- Pale-billed Antpitta**      **Grallaria carrikerii**  
 1 seen at San Lorenzo

*Pale-billed Antpitta at San Lorenzo. Best bird of the trip? Some would say so*

- Rusty-tinged Antpitta**      **Grallaria przewalskii**  
 1 heard at San Lorenzo and 2 heard at Abra Patricia
- Rufous Antpitta**      **Grallaria rufula cajamarcae**  
 3 seen and 3 heard at Cruz Conga
- Chestnut Antpitta**      **Grallaria blakei**  
 1 heard at Abra Patricia

<b>Ochre-fronted Antpitta</b>	<b>Grallaricula ochraceifrons</b>
1 male seen and 1 heard at Alto Nieva	
<b>Northern White-crowned Tapaculo</b>	<b>Scytalopus atratus atratus</b>
Heard at Afluentes	
<b>Rufous-vented Tapaculo</b>	<b>Scytalopus femoralis</b>
About 5 heard daily at Abra Patricia with 1 seen	

*Male Ochre-fronted Antpitta at Alto Nieva. Rare and local endemic*

<b>Trilling Tapaculo</b>	<b>Scytalopus parvirostris</b>
1 heard at San Lorenzo and 1	heard at Abra Patricia
<b>Blackish Tapaculo</b>	<b>Scytalopus latrans intermedius</b>
3 heard at Abra Barro negro	
<b>Marañón Crescentchest</b>	<b>Melanopareia maranonica</b>
2 seen on the Pirjos road and 1	heard at Tamborapa
<b>Elegant Crescentchest</b>	<b>Melanopareia elegans paucalensis</b>
5 heard at Limon de Porcuya and	several seen and heard at Chaparri
<b>Wing-barred Piprites</b>	<b>Piprites chloris tschudii</b>
2 seen at Waqanki	
<b>Sooty-headed Tyrannulet</b>	<b>Phyllomyias griseiceps</b>
1 seen at Waqanki and 1 west of	Moyobamba
<b>Plumbeous-crowned Tyrannulet</b>	<b>Phyllomyias plumbeiceps</b>
1 seen in a big flock below Abra	Patricia
<b>Black-capped Tyrannulet</b>	<b>Phyllomyias nigrocapillus nigrocapillus</b>
1 seen on the Atué road	
<b>Yellow-crowned Tyrannulet</b>	<b>Tyrannulus elatus</b>
1 seen at Waqanki	
<b>Pacific Elaenia</b>	<b>Myiopagis subplacens</b>
5 seen and heard at Cásupe	

*This agitated Pacific Elaenia at Cásupe received more attention than they normally do*

**Yellow-bellied Elaenia**

Singles seen and heard at Waqanki and around Jaen

**White-crested Elaenia**

Several seen and heard at La Encañada and Cruz Conga

**Small-billed Elaenia**

2 seen at Waqanki

**Lesser Elaenia**

3-4 seen at Waqanki

**Sierran Elaenia**

2 seen at Abra Barro Negro and several at Abra Patricia

**Southern Beardless Tyrannulet**

Singles at San Marcos, Bagua Grande, Tamborapa and Hacienda Limon (ssp *maranonicum*), Fairly common in the western lowlands (ssp *griseum/sclateri*)

**White-throated Tyrannulet**

6 seen at Abra Barro Negro

**White-tailed Tyrannulet**

1 heard on the Atué road

**Rufous-winged Tyrannulet**

3 seen at Limon de Porcuya

**Sulphur-bellied Tyrannulet**

1 seen at Abra Patricia

**White-banded Tyrannulet**

6 seen on the Atué road

**Elaenia flavogaster semipagana**

**Elaenia albiceps griseigularis**

**Elaenia parvirostris**

**Elaenia chiriquensis**

**Elaenia pallatangae intensa**

**Camptostoma obsoletum**

**Mecocerculus leucophrys**

**Mecocerculus poecilocercus**

**Mecocerculus calopterus**

**Mecocerculus minor**

**Mecocerculus stictopterus stictopterus**

*This Rufous-winged Tyrannulet put in a fantastic show and was one of the highlights of the trip!*

**Yellow-billed Tit-Tyrant**

2 seen at Laguan San Nicolás

**Tufted Tit-Tyrant**

2 seen at Cruz Conga

**Unstreaked Tit-Tyrant**

4 seen at San Lorenzo

**Torrent Tyrannulet**

2 seen at Rio Chonta

**Mouse-colored Tyrannulet**

2-3 seen at Waqanki

**Tumbesian Tyrannulet**

1 seen at Hacienda Limon and 1 seen at Tamborapa (ssp *maranonica*), 2 seen at Limon de Porcuya and 3 seen at Chaparri (ssp *tumbezana/inflava*)

**Rufous-headed Pygmy Tyrant**

2 seen at Abra Patricia

**Tawny-crowned Pygmy Tyrant**

5 seen at San marcos, 5 seen at Hacienda Limon, 10 at Tamborapa and 5 at Chaparri

**Grey-and-white Tyrannulet**

Common at Bosque Pomac and Chaparri

**Mishana Tyrannulet**

1 seen at Waqanki

**Peruvian Tyrannulet**

Several heard at Afluentes and Abra Patricia

**Ecuadorian Tyrannulet**

2 seen at Afluentes

**Streak-necked Flycatcher**

2 seen on the Atué road

**Anairetes flavirostris huancabambae**

**Anairetes parulus aequatorialis**

**Uromyias agraphia plengei**

**Serpophaga cinerea cinerea**

**Phaeomyias murina wagae**

**Phaeomyias tumbezana**

**Pseudotriccus ruficeps**

**Euscarthmus meloryphus fulviceps**

**Pseudelaenia leucospodia**

**Zimmerius villarejoi**

**Zimmerius viridiflavus**

**Phylloscartes gualaquizae**

**Mionectes striaticollis palamblae**

<b>Olive-striped Flycatcher</b> 1 seen at Waqanki	<b>Mionectes olivaceus fasciaticollis</b>
<b>Slaty-capped Flycatcher</b> 5 seen at Waqanki, 2 at Afluentes and 2 below Abra Patricia	<b>Leptopogon superciliaris superciliaris</b>
<b>Inca Flycatcher</b> 1 seen in a flock below Abra Patricia	<b>Leptopogon taczanowskii</b>
