

SPANISH PYRENEES TOUR REPORT

4th July to 12th July
2015

TOUR HIGHLIGHTS

Either for rarity value, excellent views or simply a group favourite.

- Lammergeier
- Black-bellied Sandgrouse
- Great Spotted Cuckoo
- Eurasian Eagle Owl
- European Roller
- European Bee-eater
- Eurasian Wryneck
- Lesser Kestrel
- Southern Grey Shrike
- Alpine Chough
- Calandra Lark
- Crested Tit
- Short-toed Treecreeper
- Wallcreeper
- Western Bonelli's Warbler
- Western Orphean Warbler
- Rufous-tailed Rock-Thrush
- Black Wheatear
- Alpine Accentor
- Rock Bunting
- Ortolan Bunting
- Citril Finch
- Apollo Butterfly
- Alpine Marmot
- Pyrenean Chamois
- Fabulous scenery

SUMMARY:

The beautiful Spanish Pyrenees provided a stunning backdrop to our week searching for the alpine specialities. We were based at a lovely family-run hotel high up in the Hecho Valley for the first six nights from where we made daily excursions into the nearby hidden valleys seeing the stunning Wallcreeper on our first morning. This was a very relaxed holiday and everyone thoroughly enjoyed the good weather, picnic lunches and numerous ice-cream and coffee breaks. As well as the fabulous scenery, we spent many enjoyable hours looking at the huge numbers of butterflies and out of 44 species seen the magnificent Apollo certainly stole the show. For a complete contrast we headed to the Boletas Birdwatching Centre in

Loporzano for two nights and our day in the steppes gave us many new trip birds to round off another great tour with a wonderfully fun group.

Day 1 Saturday 4th July

We flew from Bristol and East Midlands Airports on the short flight to Barcelona, met up and drove to the Hecho Valley in the Spanish Pyrenees. Along the way we saw many **European Bee-eaters**, **White Storks** on nests and a brief **Eurasian Golden Oriole** before reaching our base of the Hecho Valley. Here an **Ortolan Bunting** was seen amongst many **Corn Buntings**, a pair of **Tawny Pipits** were on the road in front of us and we had our first taste of the stunning array of butterflies on offer with **Dusky Heath** and **Spanish Gatekeeper** being noteworthy. It was just a short drive to the excellent Hotel Uson, situated high up the scenic Hecho Valley and our home for the next six nights.

Day 2 Sunday 5th March

It really is a feature of this 'holiday', and yes we can call this a birding holiday rather than a birding tour, that we thoroughly enjoyed our 8am breakfast after a good night's sleep. And pretty surreal for me to be back here as it must have been 6 years since I last brought a group here – but the experience of leading 15+ tours over the years to these mountains meant it quite quickly felt like a 'home from home'.

English Iris

After collecting our picnic lunch we drove a short distance to the usual stake-out site for **Wallcreeper**, which entails a slow 30 minute walk through coniferous forest before the trail opens out to a rocky path. Along the way, Nigel found our first **Crested Tit** and we saw a few other common birds before reaching the base of some tall cliffs where **Alpine Swifts** were zooming across the sky and heading like Exocet missiles into their nesting crevices high above us. Many **Eurasian Crag Martins** were also nesting here, a few **Black Redstarts** were singing, **Red-billed Choughs** flew over and some **Eurasian Griffons** patrolled the skies. But we were here for one species in particular and after a short wait a large 'butterfly-like' bird with broad red wings flew overhead and landed on the cliff above us – **Wallcreeper!** Such an adrenalin rush and this iconic species then showed on and off for the next 2 hours as we watched a pair bringing large beakfulls of grubs into a nest in a hidden crevice. Such a relief for me as this pair will pretty soon take their fledged young off to higher grounds and leave this picturesque place. Phew!

We also had our first butterflies of the day here with **Wall Brown** and **Large Skipper** showing well before heading back down to the minibus for lunch. It was quite hot by now and the alpine meadows were hosting **Silver-washed Fritillary**, **Long-tailed Blue**, **Scarce Copper**, **Silver-studded** and

Common Blues, **Piedmont Ringlet** and others. A **Firecrest** and another **Crested Tit** also showed well on the walk back down, with some families of **Coal** and **Blue Tits** in the conifer forest as well.

Upon reaching the minibus we had our picnic lunch and then enjoyed some cold drinks at the bar of the refuge, as well as seeing **Dark-green Fritillary** and a **Common Swallowtail**. Driving down the winding road we saw our first **Marbled White** and **Brimstone** before heading off to the Anso Valley. Just a few kilometres down the road we stopped when a **Short-toed Eagle** flew over carrying a snake and we jumped out to have a look, whilst beside us some flowers were attracting more butterflies and we found **Spanish Purple Hairstreak**, **Pearly Heath** and a **Spotted Fritillary**. Driving up to the Anso Viewpoint, it was teeming with yet more butterflies most of which were **Marbled White**, but amongst many fritillaries **High-brown** was new, and we also had **Pale Clouded** or **Berger's**

Clouded Yellow (struggling with the i.d of this one), as well as **Small Skipper**. We then drove down to the spectacular Foz de Binies and walked into the gorge where some **Eurasian Griffons** were patrolling overhead, and a few **Black Redstarts** and **Spotted Flycatchers** were present. A short stop at Puerta La Reina for fuel and Magnums followed and we then drove back up the Hecho Valley. A pale-phase **Booted Eagle** showed well and a **Southern White Admiral** was seen before reaching our lovely hotel with plenty of time to enjoy some cold beers and get ready for dinner.

Day 3 Monday 6th July

Well another 8am breakfast before heading out for another relaxing day in the Spanish Pyrenees. A male **Red Crossbill** calling from the conifers at the edge of the car park was a bit of a surprise before leaving and

The Roncal Valley

heading to the Anso Viewpoint. A calling **Western Bonelli's Warbler** was only seen by a couple of us, but a flotilla of **Eurasian Griffons** overhead was quite a spectacle, and they were joined by a **Booted Eagle**, **Red Kite** and **European Honey Buzzard** in quite an impressive kettle. This open forest was superb for butterflies with **Woodland**, **Great Banded** and **Rock Graylings**, and a **Ripart's Anomalous Blue**. We then crossed into the Anso Valley where a brief appearance by a **Lammergeier** left us a little frustrated before we set off up and over to the Roncal Valley. Great scenery continued as we headed up higher and higher, stopping for coffee and fries at a little restaurant.

Well I'm pleased to report we got **Citril Finch** at their usual spot very easily (the same place I last saw them 6 years ago!) , before searching for **Alpine Accentor** which took a little longer to find. But we eventually had 3 birds, one of which flew in and landed 3 metres away!! Wow! **Alpine Choughs** were common up here, and distracted us a little from the accentors, with a singing accentor on top of a conifer being very obliging as well. The **Citril Finches** were on view for ages, whilst a **Common Quail** was flushed from an alpine meadow and an awesome **Lammergeier** hunted right in front of us. Must admit this is one of my favourite spots with spectacular views, beautiful craggy habitat, nice weather and good birds. We even spotted a Pyrenean Aquilegia on the way down and then drove straight back to the Hecho Valley. More time for chilling, quaffing beer and relaxing. Ahhh this is the life!

Alpine Accentor

Day 4 Tuesday 7th July

Drove up to Selva de Oza in the picturesque Hecho Valley and quickly found a **White-throated Dipper**, along with an unidentified skipper and **Black-veined White**. We then proceeded to drive higher and walked up

through the wide-open valley with **Red-billed Choughs**, **Yellowhammers**, **Egyptian Vultures**, and **Apollo Butterfly** being seen. We spent quite some time enjoying the fabulous scenery before driving back down to the forest for lunch. In the trees right overhead as we were munching our sandwiches we saw **Short-toed Treecreeper** and **Crested Tit**.

Then we drove to Hecho village and a nice little bar for cold drinks, coffee and ice cream as it was just so hot. Afterwards we drove up towards Gabardito and searched for new butterflies with **White-letter Hairstreak** and **Essex Skipper** being added to our list.

After dinner we drove to a new site and waited patiently for the sun to set and sure enough at the appointed time a huge **Eurasian Eagle Owl** flew in and landed on some trees to our right and began calling away for several minutes before soaring across the darkening sky right in front of us and disappearing over a hill. Wow!

Day 5 Wednesday 8th July

I wasn't surprised that it was negative news about the Candanchu chairlift being open and so there went our chance of seeing any snowfinches. However, Astun was open for business and we trundled over there after breakfast, stopping to watch a few **Black Kites** quartering the fields at the bottom of the Hecho Valley. We drove through Jaca and then up towards the French border at the Col du Somport and then the ski station of Astun. We called in to one of the restaurants for coffee and bacon baguettes (oh yes) before boarding the chairlift two at a time.

As always, it was a lovely serene and peaceful experience to do this and once at the top at around 2100m we walked past the lake and up into the hills. It's just too green and 'soft' for snowfinches and to be honest it was rather quiet with only a flyover **Lammergeier**, some **Water Pipits** and a few **Northern Wheatears**. So we spent some time enjoying the fantastic scenery and then returned to the chairlift, calling in to the café for some cold drinks. A lucky move as it turned out as I heard a **Rufous-tailed Rock Thrush** singing and then we picked it up perched on some boulders quite some distance away. Scope views were decent and I breathed a huge sigh of relief as this was a much-wanted lifer for the group.

Rock Bunting

Once down at the bottom we drove out and stopped for our very late (3pm) picnic lunch, only to be joined by a singing **Rock Bunting** – a huge bonus as they just don't seem to be very numerous now. We then drove to a pine forest where **Western Bonelli's Warbler** was easily found by Roberta, and there was also **Subalpine Warbler**, **Eurasian Nuthatch**, **Three-toed Treecreeper**, **Firecrest** and **Great Spotted woodpecker**, plus a few **Heath Fritillaries**.

Day 6 Thursday 9th July

Drove higher up the Hecho Valley at 6.30am and got to see a **Black Woodpecker** flying overhead several times, along with some nice looks at **Crested Tit**, **Serin**, **Red Crossbill** and a few other goodies. After breakfast drove down to the river and spent a leisurely morning's birding seeing **Rock Sparrow**, **Eurasian Golden Oriole**, several **Garden Warblers** and scoped a fine **Eurasian Wryneck**. Had our picnic lunch in the shade beside the cool river before driving for coffee in Berdun and then checking out a little site I know that didn't really reveal anything new apart from an odd-looking **Marbled White**. So we headed back up the

valley and stopped for ice cream before getting back to the hotel at 4.45pm for a nice rest and yet more cold beer!

Day 7 Friday 10th July

We left our wonderful, secluded hotel high up in the Hecho Valley and headed down to pastures new, stopping amongst some arable fields to look for **Ortolan Bunting** again, but only hearing it this time. There were plenty of **Corn Buntings**, a few **Cirl Buntings**, and a fabulous **Queen of Spain Fritillary**. Moving on we paid a visit to a small craggy area where a fruiting bush held 2 **Western Orphean Warblers**, 2 **Subalpine Warblers** and a male **Sardinian Warbler**. A male **Blue Rock Thrush** was found on a cliff face, and 3 **Peregrines**, **Eurasian Griffons** and **Egyptian Vultures** soared in the clear blue sky. We'd already seen **Short-toed** and **Booted Eagles**, **Common Buzzard**, along with many **Red** and **Black Kites** so far today.

The bushes here were alive with warblers.

After some cold drinks and chips in a nearby restaurant we drove to Castillo de Loare, a very scenic and picturesque setting where **Rock Sparrow**, **Eurasian Hoopoe** and **Eurasian Crag Martins** were present. A very close **Apollo Butterfly** was also much appreciated here and was at a much lower elevation than I would have expected. After a short perusal of the ruins we had more cold drinks and ice-cream before driving to Lorzano and the wonderful Casa Boletas, our base for the next 2 nights. Along the way we spotted several **European Bee-eaters**..... 38 degrees here this afternoon....!

Day 8 Saturday 11th July

Left Casa Boletas at the ungodly time of 5am and headed some 90 minutes down to the steppes where we were fortunate to find that it was very chilly here for most of the morning. A **White Stork** breeding colony was seen on the drive but not a lot else. However, our arrival in this different habitat of dry steppes and rocky outcrops couldn't have been better timed as our first stop along the road shortly after sunrise set the

tone with a cracking **Calandra Lark** on the road in front of us, followed by a **Southern Grey Shrike**, our first of many **Thekla Larks** and **Black-eared Wheatears**, **Woodchat Shrike** and **Little Owl**.

Then our first **European Roller** was spotted before we came across a field full of **Calandra Larks**, **Spotless Starlings** and **Eurasian Skylarks** which were all scoped. There were a few distant **Marsh Harriers** and **Common Buzzards**, and a **Hoopoe** was also seen. Lots of distant **Kestrels** were probably **Lessers** although only a couple were positively identified, but there were probably hundreds in the area. It was just a shame that both **Pin-tailed** and **Black-bellied Sandgrouse** were only seen at great distance, although the distinctive flight calls could be heard.

This vast area is criss-crossed with numerous tracks and its easy to get lost, which we did frequently but this didn't matter as we were having fun exploring the area. A **Great Spotted Cuckoo** was seen flying next to the bus as we headed in a different direction and we watched this for a while, then a **Montagu's Harrier** flew by, and a **Spectacled Warbler** was found, with a **Sardinian Warbler** appearing nearby. Then a covey of **Red-legged Partridge** scurried across a dry field, and we also saw **Spotless Starlings**, **Peregrine**, **Cattle Egret** and a female **Hen Harrier**, as well as lots of **European Bee-eaters** throughout the morning. Some **Greater Short-toed Larks** were found in a ploughed field and were joined by a **Woodlark**. At a small pond we had **Common Coot**, **Little Grebe** and

White Storks

Common Moorhen (woohoo..!!), and then the first of 2 **Golden Eagles** were seen showing really well. As the day finally got very hot we also came across a flock of **Red-billed Choughs** and some **Jackdaws**.

At lunch we watched a few **Rollers** and an adult **Golden Eagle** from our vantage point at the top of an escarpment overlooking a wide area. So it was really hot by now and we decided to head back to the hotel and after doing battle with the satnav which was no help whatsoever in this maze of unmarked tracks in the middle of nowhere, we got lucky and finally found a paved road and made our way out of there.

During the drive back we stopped to photograph a colony of **White Storks** on some buildings at the edge of a village and then we found a pair of **Black Wheatears** and a male **Blue Rock Thrush** to round off a great trip and our birding in Spain for another year.

Day 9 Sunday 12th July

All that remained was the drive back to Barcelona, where we arrived in plenty of time to catch our respective flights back to the UK.

Nick Bray.

SYSTEMATIC LIST – SPANISH PYRENEES JULY 2015

H – Heard Only L – Leader Only Sighting

GALLIFORMES: Phasianidae

Red-legged Partridge

Alectoris rufa

Common Quail

Coturnix coturnix

PODICIPEDIFORMES: Podicipedidae

Little Grebe

Tachybaptus ruficollis

CICONIIFORMES: Ciconiidae

White Stork

Ciconia ciconia

PELECANIFORMES: Ardeidae

Grey Heron

Ardea cinerea

Cattle Egret

Bubulcus ibis
