

Heard Health

REPORTING SERVICE

Set realistic targets

Develop health plan

Practical implementation

Measure performance

Review health plan

What is it?

Using *Interherd+*, a performance analysis and reporting program, FarmVets SouthWest can now extend their on farm herd health consultation to include written reports specifically tailored to your herd.

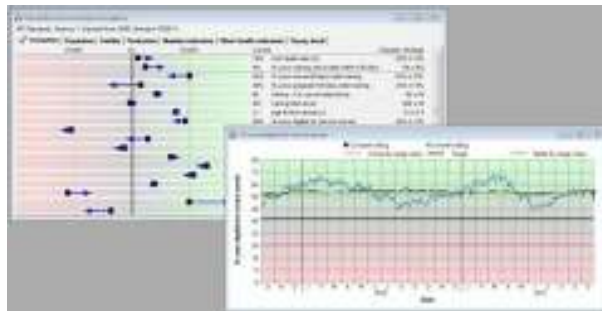

With direct links to milk recording services, e.g. NMR we can produce current and accurate reports on all aspects of your herd's performance, including:

Mastitis - new cases, chronic cases, dry period performance, SCCs

Fertility - calving intervals, service intervals, conception rates

Production - milk profiles, fat/protein monitoring, general cow performance

How will it benefit my herd?

- **Tailored reports** specific to your own farm performance and targets.
- **Benchmarking** allowing comparison to your own annual performance or to other herds.
- Integrated reporting at **routine visits** or as a separate consultation.

What is required of me?

Accurate records are essential

The more accurate you record, the more accurate we can report!

Regardless of your recording method (NMR full or DIY, green sheets or on farm computer programs) records must be kept **up to date and accurate**. This includes recording **DAILY**:

ALL Milk yields

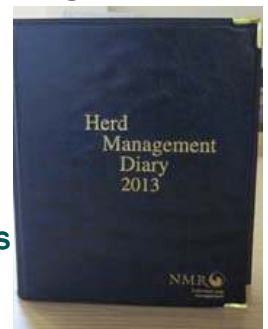

ALL Services

ALL Calvings

ALL PDs - even if they are PD negative!

ALL Mastitis Cases - including which quarter

ALL Lameness Cases - including which foot
