FVSW celebrates 5 years at Sedgemoor Market

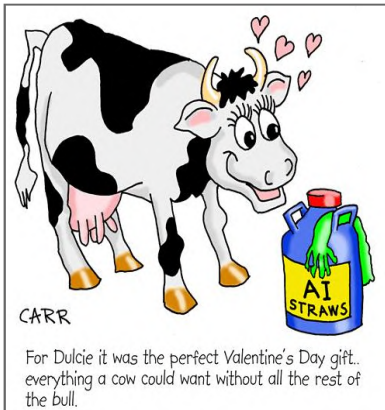

We have now been at Sedgemoor Market for 5 yearshow time flies! We would like to thank you all for your loyalty and support - to those who have been with us since the beginning and also those of you who have joined us more recently.

As always, we will strive to continue to supply you with excellent service and competitive pricing in the future.

AI Courses

We have run several AI courses at Cannington College in the past and plan to hold the next AI course on Monday 13th May.

CARR

For Dulcie it was the perfect Valentine's Day gift.. everything a cow could want without all the rest of the bull.

The first day of the four day course is held at our Sedgemoor Market office and involves a short talk on fertility and AI in cattle, together with a demonstration of correct semen handling and practicing AI technique.

The remaining three days are held at Cannington College: Days 2 and 3 involve practicing on live barren cows (your arms **WILL** ache!) and the final day is a "test" day when you demonstrate correct semen handling practice; perform the AI procedure on a cow and receive your certificate. The cost of attending the course is £200 (dependent on the provision of a holding number). To book a place please call either David or Tracey at our Sedgemoor Market office.

Worming & Fluke News

1. "Black scours in lambs"

Due to the very cold Spring, this year's forecast for *Nematodirus Battus* infection in lambs is **VERY** high. Look out for black scours at the end of April through to May. This type of worm can be rapidly fatal. Treatment of choice is **Endospec 2.5%**

2. Rumen-Fluke

We are seeing more and more cases of Rumen Fluke in cattle. This disease, which is relatively new to our area, causes ill-thrift in cattle. Treatment of choice is **Levafas Diamond**.

3. NIL MILK WITHDRAWAL Liver fluke treatment is now available

We can source this from Europe via a special import licence. Please speak to Art or Rob if interested.

4. NIL MILK WITHDRAWAL Worm Treatment

We have also sourced a generic form of Eprinex. This new product is called **Eprizero** (Norbrook labs) and should prove a slightly cheaper option than Eprinex. Speak to Art if interested.

Bull Breeding Soundness Exam

The breeding season for your suckler cows is rapidly approaching and this is a good time to think about your bull. To achieve maximum conception in a short period it is vital that your bull is performing well.

To find out if your bull is fertile we provide a **Bull Breeding Soundness Exam**. The bull will be given a full physical exam and semen will be collected for microscopic examination. We have a modern electro-ejaculator so that the bull can be tested safely and securely whilst in a crush. Please contact any of our offices if you are interested

May Bank Holiday Opening Hours

Our offices will be shut on Bank Holiday Monday 27th May. Drugs can be collected from our Sedgemoor Office **by appointment only**.

Flying Midge Control

Now is the time to think about flying midge control - especially in light of Schmallenberg virus.

We have secured an excellent deal on Butox Swish. Please speak to Art, Rob or Mike Price for further details.
