

PerformanceMonitor **YOUNGSTOCK**

Reduce deaths

Reduce disease

Reduce culls

Increase milk yields

Increase longevity

Performance Monitor Youngstock is a very useful management tool to improve the performance of your replacement heifers and bring them to profit as soon as possible. The farms that have joined our scheme are doing really well and their initial results are very promising. The scheme helps farmers to ensure their newborn heifers achieve the best possible start and then monitors growth and performance.

Results are monitored and analysed and where necessary changes in young stock management will be implemented.

In summary:

- Colostrum intake for every calf will be monitored by blood analysis
- Weight gains for every calf will be monitored
- Disease occurrence will be monitored
- Heifer fertility will be monitored
- Your farm will get a specific young stock action plan

Please ask your vet for more information or contact any of our offices
