

Free Standing Blinds & High Seats

'Best Seat in the house'- Product Review. Shooting Times May 2017

'European style' freestanding blinds with a little extra 'finesse' offering the hunter excellent protection from the elements and the safest position from which to take their shot. *Our blinds were featured in the SHOOTING TIMES & COUNTRY MAGAZINE May 2017 edition in an article by Graham Downing- Best Seat in the House Product Review.*

All of our freestanding blinds provide for full 360° shooting; the shooting rest is designed to be comfortable to shoot from both sitting and standing positions. All of our blinds come with internal seating and are designed with the comfort and safety of the hunter in mind.

The elevated shooting position ensures a safe trajectory for the bullet, always providing a safe backstop.

The design of our blinds allows for freestanding installation as the complete blind sits comfortably within the base dimension, ensuring the blind centre of gravity remains within the base area.

As an optional extra we can provide your blind with locking window shutters, full height locking door which is split at the shooting rest position, removable access ladder or a staircase with handrail instead of the standard ladder to make access to the blind easier for some hunters who may find the ladder a little too difficult to use. Our blinds are manufactured in our workshops in Kent using fully Tanalised timber, ensuring a long service life and are available for collection or delivery with optional on-site installation if required.

The benefits of our blinds are:-

- Elevated shooting position offering safe backstop with every shot.
- 360° shooting.
- All weather protection.
- Ability to sit for hours in comfort.
- Easy access & installation.
