Compromise"*

eCONO APEX RANGE STABLE SPECIFICATION- 10ft Deep Units with 800mm Canopy Overhang

Unit Size

eCONO Apex Loose boxes 3.6m x 3.0m (12ft x 10ft), tack rooms 1.8m, 2.4m, 3.6m x 3.0m (6ft, 8ft & 12ft x 10ft), open barns 2.4m, 3.6m, 4.8m, 7.2m x 3.0m (8ft,12ft,16ft,24ft x 10ft)

Wall Construction

Walls are built with nominal 75mm x 50mm CLS timber framing, spaced at 600mm centres.

Wall Cladding

Quality rebated Redwood ex 16x125mm shiplap

Roof Construction

Purlins are 100mm x 47mm regularised timber pressure-treated to BS EN3351-UC3.2 spaced at 400mm centres, supported by a continuous timber support rail. The roof covering is black Onduline corrugated sheets.

Doors

Stable doors are 2.1m high, 1.2m wide. Bottom doors are full-framed, ledged & braced lined with 11mm heavy-duty OSB 3 (moisture resistant) and are 75mm thick. Top doors are ledged and braced. A 200mm deep anti-chew strip is fitted to the top of the lower door. All door fittings are heavy-duty galvanised, to include 450mm tee hinges, 150mm Brenton pad bolts, heavy-duty kick over latch and a cabin hook to the top and bottom door.

Tack room doors are ledged and braced and fitted with 450mm Tee hinges and a 150mm Brenton pad bolt.

Windows

Available as an optional extra.

Kickboards

Loose boxes are lined to 1.2m high with 11mm OSB 3 (moisture resistant)

Tack rooms and hay stores are not lined as standard but can be lined if required.

Ventilation

The open eave construction provides adequate ventilation. Additional louvre vents can be added as an extra.

Canopy Overhang

Front overhang extends to 800mm

Guttering

Available as an optional extra

Height

To eaves, measures 2.24m and to ridge 2.85m

Talk Grilles

Available as an optional extra.

Barge Boards

Fitted to each gable end of the building- 18mm x145mm prepared smooth timbers

Corner cover fillets

Cover fillets are fitted to the panel joints

Timber Treatment

All timber used in the construction of this building except the kickboard lining is pressure treated to BS EN 3351-UC3.2

The base of the building is fitted with polyurethane blocks to keep the base timber frame off the concrete, no need for brickwork.

Mobile Shelters

Full frame timber skids meet with the requirements for a mobile building, moving your shelter over short distances only is recommended on timber skids. Avoid sharp turns and move at very low speeds. Metal skids are more suitable for a fully mobile shelter. Any damage caused when moving your shelter will be your responsibility.
