

CVE Shop Circular Duct Access Doors are designed for use on spiral ducting.

Manufactured from pressed galvanised steel and easy to install with sealing backplate and twist-lock clamps.

Each door is supplied with an adhesive template, select where you want the door to be and stick the template to the duct, cut around the template with a jigsaw grinder or plasma cutter.

To fit the door, slide the inner clamping plate into the hole and manipulate it until its central over the hole. Tighten the two twist-lock clamps until they are tight and have sealed to the duct.

Circular Duct Access Doors are available from stock in various sizes to suit visual access and cleaning from 80mm diameter to 1000mm diameter.
