

## TO FIND A GRAVE SITE

Start with the Index of Family names – there will be a six digit number for each grave – take the first two letters in each half e g for **402398** select **40 39**

1. To find a grave we start with the North–South axis (Northing) – **in the example above it will be in row 40**
2. The second pair of numbers gives the position on the East-West axis – **in the example above it will be row 39**

Please note that the main footpath runs from East to West

- Gate = 1st East

### Note

Please note that the churchyard has not been laid out in a military style so the rows of headstones are often slightly irregular!
