Colour Characteristics

Colours are shown as accurately as printing allows. A lightfastness rating and pigment specification is provided for each colour as your warranty of quality.

Pigment Description

PV = Pigment Violet
 PY = Pigment Yellow
 PO = Pigment Orange
 PW = Pigment White
 PBK = Pigment Black
 PR = Pigment Red
 PB = Pigment Blue
 LF = Light Fast

Pigments

○ Transparent ● Semi ● Opaque

Both opaque and transparent pigments are used in the Chroma's Jo Sonja line. Transparent pigments reflect light differently than opaque pigments, which do not allow the light to pass through. Colours labelled as transparent allow the light to pass through the transparent pigment particles, thus allowing the undertone to show through. These make wonderful colours for glazing.

Temperature

↓ Warm ↓ Warm/Cool ↓ Cool

ASTM Pigment Lightfastness

ASTM 1 – Pigments of excellent lightfastness
 ASTM 2 – Pigments of very good lightfastness

Family

N = Neutral
 Y = Yellow
 YO = Yellow-Orange
 O = Orange
 RO = Red-Orange
 R = Red
 RV = Red-Violet

V = Violet
 BV = Blue-Violet
 B = Blue
 BG = Blue-Green
 G = Green
 YG = Yellow-Green

P65 – The State of California in the United States has unique labeling requirements for products that contain certain chemicals. These chemicals are listed, under rules of the California Safe Drinking Water and Toxic Enforcement Act (otherwise known as Proposition 65 or Prop 65), as being known to cause cancer and/or reproductive toxicity. If chemicals on this list are in products sold in California, the product label is required to provide clear and reasonable warnings to that effect. As required by California law, the result is that we apply warnings to products which contain Prop 65-listed chemicals, where such are listed as ingredients on the product's Safety Data Sheet and/or label, regardless of where they are sold. Full information on this law, a current list of chemicals and other resources can be found on California's Prop 65 website: www.p65warnings.ca.gov
