

TUNING YOUR GUITAR

The easiest way to tune your guitar is to get an **electronic guitar tuner**.

If you don't have a tuning guide you can tune the guitar to itself anyway. This means that the guitar will sound in tune when you play on your own, but might not be exactly right if you tried to play along with another guitarist or other musician.

Starting on the Bottom E string, play the A on the 5th fret. This should sound the same as the A string.

Then play the D on the 5th fret of the A string, this should sound like the D string.

Next play the G on the 5th fret of the D string, this should sound like the G string.

Next play the B on the **4th fret** of the G string, this should sound like the B string.

Finally play the E on the 5th fret of the B string, this should sound like the top E string.

Check to see if the top E and Bottom E sound similar.
