

HOW TO MEASURE FOR A HARNESS

Standard Harness

Neck piece x 2	A – B	From just in front of the shoulder blades, down & round to the breast bone (Note: the centre of the Y sits slightly higher than you may be used to in other fleece harnesses)
Girth Strap	C-D-C	Around the girth approximately 1" behind the leg (I actually prefer slightly more than 1" to ensure no rubbing or pinching)
Front	B-D	Between front legs from breast bone to girth strap
Top	A-C	From the top of the neck piece (just in front of the shoulder blades) to where the girth strap sits

Belt & Braces Harness

As above plus

Tummy	E-F-E	Around the tummy just behind where the ribcage tucks (ensuring there is enough clearance for 'boy bits')
Back Strap	C-E	Along the backbone between girth & tummy strap
