Acclaim

Why a baby lock?

For decades, baby lock products have been prized for their robustness and ease of use in particular. Both beginners and advanced sewers can enjoy the machines' special technical features and all of the possibilities these offer from the word go. So, whether you rely on the factory settings or adjust the machine to suit your individual needs, you will love the outstanding sewing results, no matter which fabric or thread you use.

The machines have been developed by baby lock engineers and combine clever with high-quality mechanical features. They require no computer technology, making them less prone to trouble and extremely durable, therefore guaranteeing long-lasting sewing pleasure.

The world's first overlock machine that was developed for household use was a baby lock. The corporate philosophy that was defined at the very beginning – to develop top-quality, first-class products – has been strictly followed to this day: quite simply, Made in Japan. The Japanese company does not rely on mass production, making this product something very special.

The machines are produced in a craft-like manufacturing facility in the north of Japan. Every single product has to pass a 20-minute function test. The staff concentrates on sewing all of the various stitches and optimising the thread tension. They polish, inspect and fine-tune the important and sensitive loopers by hand. These are just some examples of the many individual operations performed by the specialist staff.

Acclaim

An overlocker with that certain extra.

„No matter which project I'm working on, sewing with the Acclaim is a real joy.

I feed the threads into the ports, press the air threading system buttons to thread the needles and loopers and away it goes – the machine overlocks every conceivable material.

The seams are a real feast for the eyes, even without tiresome thread tension adjustments. This saves so much time.

All in all, this makes it a whole lot faster and easier for me to make my sewing projects come true.“

Overlocking - without threading and thread tension stress

Enjoy your hobby without any worries

Working with overlockers calls for a steady hand, a practised eye and often a lot of patience when it comes to threading. This last step can be so difficult for some beginners that it takes the fun out of sewing. But don't despair, help is on the way! Our sophisticated RevolutionAir™ threading system solves this problem on its own. Thread your needles and loopers at the touch of a button with a jet of air.

Make your ideas come true and be more creative than ever before

Creative ideas can only be brought to life if they have enough space to unfold. The Acclaim leaves nothing to be desired in terms of ease of use and the processing of a wide variety of fabrics. Thanks to the automatic thread delivery (ATD), different materials and threads pose no problem for this machine. Even handling difficult fabrics becomes child's play because the machine always provides the correct setting to achieve an optimum sewing result. The thread quality is irrelevant. Whether a sturdy yarn or an ultra-thin thread, the seams always look neat. You will be won over by the Acclaim's wide variety of finishing and fanciful decorative stitches. The unique wave stitch is the perfect way to put the finishing touch to any of your projects.

*It's never been easier to achieve
your sewing goals*

All baby lock users love the comfortable arrangement of the controls. Each of the dials and levers is close to the sewing area. This means that your hands can stay where they should be, on your sewing project.

A number of features of the baby lock overlock machines have been improved for the Acclaim. The differential feed system, for instance, now works at a new level. A one-piece feed mechanism has been added to ensure the fabric's proper guidance. This allows more consistent gathering, even with thicker materials. While most machines use slanted needles, which exert unnecessary pressure on the fabric or may even damage the material, baby lock's vertical needles work effortlessly and highly reliably. The direct up-and-down movement protects your fabric and prevents the needles from bending. In addition, the vertical penetration of the needles allows for a thicker fabric

Everything in its place:
a spacious accessory
compartment with
magnetic tool minder

Choice of different
finishing and decorative
stitches such as
the creative 2-thread
flatlock stitch or the
unique wave stitch

Perfect fabric transport
thanks to differential feed
